INTRODUCTION 1—6

Architecture studied from different view-points ; reliance on personal field observations, 1-2 ; examination of the canons of Indian architecture and restoration of ancient texts, 2-3 : combination of tradition, field-work and Sanskrit learning, 3 ; continued in the present book, 3-4 ; study of the ideas conveyed by forms of architecture, 4 ; accounts of mss. used, 4-6.

I. THE BOOK OF ARCHITECTURE AND ITS AUTHOR 7—8

Name of the Manuscript, 7 ; of the Author, 7-8 ; of certain artists, 8.

II. CLASSIFICATION OF SOILS 9—17

The four classes of soils, 9-11 ; selection of soils, 11-13 ; best dwelling site, 13-14 ; divination, 14-15 ; classification of sites, 15 ; effect of living on each kind of building site, 16-17.

III. A CHAPTER ON AUGURY 18—28

Signs and indications at first measurement,—thread slipping from the hand, or any one making faces, 18-19 ; conch-shell, 19 ; wind blowing strongly, or hail-storm, 20 ; cow seen or heard, 21 ; a great noise, 22 ; music, 22-23 ; fire seen, 23 ; a person heard weeping or sighing, 23-24 ; a dog barking, 24 ; a shaven-headed man, rice-offerings to the manes or the howl of a jackal, 25 ; rain, 25 ; if an elephant trumpets or a horse neighs, 26 ; or a frog croaks, an ass brays or a snake is seen, 27 ; if a crane is seen or there is a peal of thunder, 28.

IV. DETERMINATION OF THE NAGA'S POSITION 29—36

A great nāga round each building site ; the lie of the nāga, 29-31 ; movements, 31-32 ; eight divisions of the nāga's body, 32-34 ; posting of the pillar on the nāga's body, 34-35 ; fixing of the door with reference to the body of the nāga, 35-36.

V. ASTROLOGICAL CONSIDERATIONS 37—43

The effects of building in different months of the year, 37-38 ; in the light or dark half of the month, 38 ; on different days of the week ; during different phases of the moon, 40-41 ; rabiśuddhi, 41-42 ; influence of the Zodaical signs, 42 ; of the constellations, 43.

VI. ASTROLOGICAL CONSIDERATIONS (Contd.) 44—56

Bandhas, 44-45 ; their effects, 45 ; the use of a house determined by its bandha, 45-46 ; disposition of the doors, according to bandhas, 46-47 ; the star under which a house is built, 47-49 ; The probable age of the house and means of its destruction, 49-50 ; *nabāngsa* of the house, 50-51 ; presiding *nāga* of the house, 51-52 ; expenses of the building, 52 ; determining the orientation of the door, 52-53 ; and thence the 'luck' of the place, 53-56.

VII. THE AUSPICIOUS CEREMONY 57—64

Signs of good luck and bad at the auspicious ceremony, 57-58 ; general matters, 58 ; list of things required for the ceremony, 59 ; effects of different things in the ground, when posting the pillar, 60-61 ; the ceremony of posting the auspicious pillar, 61-62 ; laying the foundation stone, 62-64.

VIII. MISCELLANEOUS MATTERS 65—71

Trees, 65-67 ; disposition of water in the neighbourhood, 67 ; owner, priest, professor and others, 67-69 ; the ceremonial entry, 70 ; Sālābriddhi, 70-71.

IX. CERTAIN GENERAL QUESTIONS 72—77

Units of measurement, 72 ; geometrical figures, 73-74 ; foundation, 74-75 ; building-stones, 75 ; dimensions of stone-blocks, 75-76 ; faults in building operation and their effects, 75-77 ; merit acquired by building a temple, 77.

X. THE DIFFERENT TYPES OF ORISSAN TEMPLES 78—83

Four different types—Rekha, Bhadra, Khākharā, Gouṛiya, the last an exotic, 78 ; analysis of the three prevalent types in their component parts, *piṣṭagaṇḍi*, *masṭaka*, 78-79 ; *gaṇḍi* a distinguishing factor, in the Rekha, 79, Bhadra 79-80, and Khākharā temples 80-81, ; four classes of each

type, 81 ; *rathakas* or *pagas*, 81 ; specifications of different temples, 81 ; classifications of temples according to the number of their *pagas*, 81-83.

XI. ON PEDESTALS 84-90

The eight pedestals, 84 ; *padma piṣṭa*, 84-85 ; *singha piṣṭa*, 85-86 ; *khura piṣṭa* 86-87 ; *parijāngha piṣṭa*, 87 ; *kaṇi piṣṭa* 88 ; *bedi piṣṭa* 88-89 ; *bhadra piṣṭa*, 819 ; *suthira piṣṭa* or *sundara piṣṭa*, 89-90 ; *kumbha piṣṭa* or *kurma piṣṭa*, 90.

XII. THE REKHA TEMPLE : GENERAL APPORTIONMENT OF PARTS 91-101

Names of vertical segments and the meaning of the terms *bāṭa*, *pābhāga*, *jāngha*, *baraṇḍa*, *gaṇḍi*, *paga*, *bhūmi*, *amlā*, *śikhara*, 91 ; of *bisama*, *bedi*, *masṭaka*, *khapuri*, *kalasa*, *āyudha*, 92 ; concept of the Rekha temple as the human body and as a mountain ; classification according to the nature of the *bāṭa*, as consisting of 5 or 3 elements, *tri-anga* and *panchānga* types, 92-95 ; specifications of a *tri-anga* Rekha temple, 95 ; *tri-anga* Ratnasāra, 95-96 ; general apportionment of parts, *panchānga* Rekha temples, in a tabular form, 96-100 ; different specifications for *bāṭas* of the *panchānga* type, 101.

XIII. THE REKHA TEMPLE : DETAILED VERTICAL SPECIFICATION 132-118

The *pābhāga*, 102-104 ; the set-back of the *pābhāga* from the *piṣṭa*, 104 ; the *tala-jāngha*, 104-106 ; its set-back, 106 ; the *Bāndhanā*, 106-107 ; the *uparjāngha*, 107 ; the *baraṇḍa*, 108 : the *gaṇḍi*, 109-111 ; its curvature, 111-114 ; its set-back from the edge of the *bāṭa*, 114 ; deities presiding over the ten *bhūmis*, 114 ; meaning of *Rekhaguṇāghāṭa*, 114-115 ; *bhūmi*, 115 ; the *masṭaka*, 115-116 ; amount of set-back or projection, 116-117 ; *kalasa*, 117-118.

XIV. THE REKHA TEMPLE (Continued) : CERTAIN DETAILS OF CONSTRUCTION 119-123

Thickness of the walls, 119-120 ; two exceptions, 120 ; construction of the interior, 120 ; corbelled arch above the lintel, 121 ; the *paga* and *dhāra*, 121-122 ; note on subsequent measurements, 122-123 ; on the distribution of *śikharas*, 123.

XV. THE REKHA TEMPLE (Concluded): SPECIFICATIONS OF DIFFERENT EXAMPLES 124-153

Thirty-six examples, 124-125 ; *Nabaratha* temples, 125-139 ; Aṣṭaśrī 125, Bahantisāra 125-26, Bahargamasāra 126, Baṛabhī 126, Biharasāra 126-27, Biswakarma 127, Chitrakūṭa 127-28, Drabibana 128, Gaṛura 128-129, Indra 129-30, Kailāsa 130-132 Kshetrabhūṣaṇa 132, Mahā Meru 133-34, Mandāra 134-35, Meru 135-36, Nagarī 136, Nisāra 136-37, Ratnasāra 137-38, Sarbāngasundara 138, Śreetaru 138-139 ; *Saptaratha* 139-47 ; Aṣṭaśrī 139, Biraṭi 139-40, Chitrakūṭa 140, Chhatribhūṣaṇa 140, Duipadma 141, Gaṛura 141, Kailāsa 141, Kalpataru 141-42, Kanihastha 142, Kshetrabhūṣaṇa 142-43, Kritidūshaṇa 143, Laghumandāra 143, Mandra 143-44, Mahādrāviṛa 144, Mulaśreebachha 144-45, Nandibardhana 145, Pūrṇasāla 145-46, Ratnasāra 146, Sarbāngasundara 146 ; Subarṇakūṭa 147, Śrībatsa 147, Śreetaru 147, Tripati 147 ; *Pancharatha* temples : 148-53 ; Baṛabhī 148, Bimāna 148-49, Brishabha 149-50 ; Drabibana 150, Duipadma 150-51, Kailāsa 151, Khaṇḍasāla 151, Madhya 152, Mahābaṛabhī 152, Mūla Śreebachha 152-53 ; Nanda Śreebachha 153, Ratnasāra 153, Śreebachha Khaṇḍasāla 153.

XVI. THE BHADRA TEMPLE : GENERAL CONSIDERATIONS 154-157

Other names, 154 ; Gainṭhiāla, 154-55 ; relation between the Rekha and the Bhadra, 155-56 ; Gamā, 156 : Classification of Bhadra temples, 156-157,

XVII. THE BHADRA TEMPLE (Continued): SPECIFICATION OF DIFFERENT EXAMPLES 158-170

Reference in the Śilpasāstras, 158 ; Bhadra, 158-64 ; Mahābhadra 164 ; Bijayābhadra, 165 ; Keshari, 165-166 ; Nalinībhadra, 166-170.

XVIII. THE KHĀKHARĀ TEMPLE 171-173

Dravira, 171 ; Baṛabhī, 172 ; Kośolī, 172-173

XIX. MISCELLANEOUS 174-177

Lakshmī-dwāra, 174 ; Toraṇa or an arch, 174-175 ; Stambha, 175-176 ; Nabagrahas, 176-177

# INTRODUCTION

Indian architecture has been studied from various points of view by students of Indian history. The studies of Fergusson, Prasannakumar Acharya, Manomohan Ganguli and Havell may be taken as representative of the four methods of approach which are generally followed in this connection.

Fergusson and others after him, like Cousens or Rakhaldas Banerji, depended principally in their researches on personal field-observations. Almost all that we know at present regarding Indian architecture has been learnt through this process ; still, the method itself has suffered from an important limitation in the past. The workers from the west, as well as their Indian disciples, were trained in the schools of Europe, and as they were not in touch with Indian craftsmen, they lost the means of gaining an insight into the traditional point of view in regard to architecture. They did not know how buildings and temples were classified by the builders themselves, what distinctions were drawn between different varieties of temples, which were considered the finer points in building-technique and so forth. In other words, what was essential and what secondary according to the local science of architecture was not known to any one. This is the reason why, in some historical reconstructions of the Fergusson school, primary matters have given the place of importance to matters of secondary value. Such a shortcoming was however inevitable, in view of the

fact that Indian scholars generally followed the tracks of the western pioneers, instead of trying to restore the original science of Indian architecture, which they might more profitably have undertaken.

Recently, a number of Sanskritists like Ganapati Sastri and Prasannakumar Acharya, have been led into an examination of the canons of Indian architecture, the existence of which had been known for a long time past. They have succeeded in restoring the text of about a dozen books, but their labours have not yet yielded the results which were expected of them. The fact is that the master-builders of ancient India transmitted most of their technical knowledge to pupils by word of mouth. So they never considered it worth while to keep in writing such details as the methods of polishing or dressing stones or the means of transporting them to great heights and so on. These were left to the practical training which every architect was expected to undergo under the guidance of his preceptor. The craftsmen (*silpins*) therefore only recorded such information as they were likely to forget; such as the points of difference between various types of temples, details regarding their ornamentation, the relation between different parts of the body of a temple and so forth. But these details were kept in a sort of cryptic form. At one place, the numeral 5 or 7 might appear beside a term. This may stand for 5 units of measurement or it may mean 5 times the length of some other object; only the experienced craftsman was expected to know what it really stood for. The canonical books of the *silpins*

are therefore of the nature of mnemonic notes and are consequently unintelligible to one not belonging to the caste of *silpins*. This has been the reason why, in spite of the labours of the scholars, our knowledge of Indian architectural science has not advanced as far as might have been expected.

The third approach to architectural study in India was initiated in the year 1835 by Ram Raz in an essay entitled "Architecture of the Hindus." Ram Raz read the Sanskrit text of certain *silpasāstras* with the aid of local craftsmen and employed the knowledge so gained in analysing architectural forms extant in the Deccan. A combination was thus effected between the craftsman's traditional knowledge, field-work and Sanskrit learning, and the results yielded were correspondingly of a very valuable character. In the year 1912, an engineer named Manomohan Ganguli, who was also a Sanskritist and a wide traveller applied the same method to an analysis of Orissan architecture.* Ganguli had secured an Oriya manuscript on architecture, but having no parallel reading in his possession, he had failed to make proper use of it. He therefore analysed the forms with the help of local craftsmen and also applied his knowledge of western architecture to the task. In this manner he succeeded in restoring a large part of the traditional knowledge of ancient Orissa.

The present book may be taken as a continuation of the work which Ganguli thus began in Orissa. Several readings of the Orissan canons of architecture have been secured and studied with the help of local

* Manomohan Ganguli : *Orissa and her Remains*, Calcutta, 1912.

craftsmen. This has been supplemented by field-work done in different parts of Orissa and the neighbouring provinces. A workable restoration of the science of architecture in Orissa has thus been secured. When similar restorations are available for other provinces in India and the existing examples of architecture studied in their light, it will be possible to reconstruct the history of Indian architecture with some degree of certainty.

The above three methods do not however exhaust the approaches to the study of architecture. Forms are employed by the artist to express certain thoughts, and the student of architecture may either be interested in the history of the forms or in that of the ideas which they are meant to convey. In one case he is like a student of grammar, while in the other, he is like a student of literature. Havell, unlike Fergusson, was chiefly interested in the latter aspect of Indian architecture. To him, architectural history became a means of investigating into the history of Indian thought and civilisation. But the profound penetration necessary for this task is not only rare, but the results are also not capable of scientific verification. We shall therefore have to be content with a scientific study of the outer forms alone and rest satisfied with the light which it may throw upon the development of Indian history.

A word has to be said regarding the nature of the mss. used in connection with the present work. Altogether seven mss. have been examined so far, most of them having been collected from the district of Puri. Only one of the mss. comes from the village of Lalitgiri in Cuttack district. Five of the mss. are different recensions of a

treatise on architecture named *Bhubanapradipa*, the rest being copies of a different book dealing with the erection of thatched huts. The name of the latter book is merely given as *silpi-pothi* or *silpa-sāstra* which means "The Book on the Arts." Certain general matters regarding the selection of building-sites, the classification of soils etc. are common to both the treatise ; both have therefore been used in writing the first part of the present book. The second part of the book dealing with the architecture of temples has been based on the five recensions of the *Bhubanapradipa* referred to above.

The mss. are written on palm-leaf with an iron style. The type and language are not archaic but appear to be quite modern in character. In fact, the Lalitgiri ms. and that belonging to Nilkantha Maharana are actually known to have been written within the last thirty or forty years. No evidence regarding the age of the other mss. is forthcoming, but it is certain that the tradition recorded in them has been handed down from very ancient times.

The mss. have been referred to in the present book by means of *nāgari* letters as follows :

(क) Ms. belonging to Rama Maharana, Puri. *Bhubanapradipa.* 96 leaves or 192 pages.

(ख) Ms. belonging to Babaji Maharana, Puri. *Bhubanapravesha* or *Pradipa.* 108 leaves.

(ग) Ms. belonging to Nilkantha Maharana, village Bantuli, Dist. Puri. *Silpi pothi.*

(घ) A printed book entitled *Silpasāstra* in Oriya, published from Cuttack by Sj. Mohan Sahu in 1923 (4th edition). The book is purported to have been written by Bauri Maharana.

(ङ) Ms. belonging to Surya Maharana of Lalitgiri, Dist. Cuttack. (*Bhubanapradipa*)

(च) Ms. belonging to Bairagi Maharana of Bhubaneswar, Dist. Puri. (*Bhubanapradipa*). 146 leaves.

(छ) Ms. belonging to Dharma Maharana, Puri. (*Bhubanapradipa*) 124 leaves.

(ज) Ms. belonging to Damodar Maharana, Bhubaneswar.

## I. The Book of Architecture and its Author.

Regarding the name of the MS., we find the following passages :

(क) इति नैमिषारण्ये भुवनप्रदीपे विसिक्रमा मुनिसंवादे प्रसादलक्षण ( पृः ४० )

(ख) इति नउमिसारण्ये भुवनप्रवेसे विस्वकर्मा मुनिसंवादे ( पृः १ )

प्रसाद घटणा पोथि घटणा प्रदीप ' ' ( पृः ८१ )

(च) श्री विघ्नेस्वराय नमः । : । इती नउमिसा आरण्ये ।। भुवनप्रदिपे । विस्वक्रमा मुनि संम्वादे । प्रसाद लक्षण । १ । ( पृः २ )

It will appear from a consideration of these passages that the name of the book is BHUBANAPRADIPA. The book was so well-known that it was sometimes referred to as the PRADIPA, merely.

The word *bhubana* means the fourteen worlds including heaven, earth and the nether worlds. In the present case, it might be taken to mean 'heaven' or the abode of the gods. As a matter of fact, in the BHUBANAPRADIPA, we find only descriptions of temples, altars and similar structures. There is practically no reference to secular architecture. Hence the word BHUBANAPRADIPA may be taken to mean 'The Lamp (which sheds light on the characteristics) of the abode of the gods'.

*The Author*—The author of the book is referred to as Viswakarmā, the sage. But the word *viswakarmā* seems to have adopted a generic significance, as will be evident from the following passage in MS. (ख)

(ख) यपकला ब्राह्मणंकर दक्षिणा। एहि धरणरे ज्योतिषर दक्षिणा। ए दक्षिणों अंधेके विस्वकर्मा दक्षणा। एहिरूपे उपदेष्टाः दक्षिणा····· (पृः १७५)

(With reference to the parting dues of each functionary at the end of a ceremony, it is said that)

The Brahmin who will perform *japa*, his dues; equivalent (are the dues) of the Astrologer. Half of that are the Viswakarma's dues; equivalent that of the preceptor, etc.

*Names of certain artists*—It is unfortunate that we know hardly anything about the great artists of Orissa who built the temples of Bhubaneswar, Puri or Konarak. In the present mss. there occur two names, one being that of an artist, while the other is that of a carpenter.

(क) पिङ्गलनामना स्थिपि॥ अहिद्र सुत्रधारणा (पृः ६३)

(ख) पींगलीनामना स्थिपी। अहिव शूत्रधारणा (पृः १४)

Pingala, the artist; Ahidhara (?) the carpenter.

अदा, अजा etc. are evidently corruptions of आज्य, *ghrita*.

1. The Brahmin soil is white in colour. It smells like clarified butter and is astringent to the taste.

The Khsatriya soil is blood-red in colour, smells like blood and is bitter to the taste.

The Vaisya soil is yellow in colour, smells like alkaline earth and is sour to the taste.

The Sudra soil is black in colour, smells like fæces and has a taste like that of wine.

If one is unable to determine the caste of a soil by colour, taste or smell, he should prepare a small piece of ground with the plough (while uttering the *Sāvitri mantra* at the same time) and sow sesamum seeds therein. If sprouts appear after the third night, it is Brahmin soil ; similarly, if they appear after 4, 5, or 6 nights, they should be recognised as Kshatriya, Vaisya and Sudra respectively. If the seedlings appear after 7 nights, then the soil belongs to the caste of *pisāchas* (devils) and men should not build on such soil.

2. If a man lives on the soil which belongs to his own caste, he will be happy. But a Brahmin may

live on any one of the four classes of soils, a Kshatriya can live on three, a Vaisya on two, and a Sudra on only that which belongs to his caste.

If, through temptation, a man lives on soil which belongs to a caste higher than his own, then surely destruction shall follow him. The place where his house stands shall be converted into a waste, and jackals shall fill the place with their cries even during the daytime.

If a man lives on soil belonging to his own caste or on one lower than his own, then surely will he live happily with friends, relations and attendants.

3. A place which is sheltered by fragrant plants, cool and undisturbed, spacious and surrounded on all sides by water, is good for dwelling purposes. A site with the opposite of these qualities is not good.

A place full of hairs (human ?), gravel, bones, sand or thorns is fearsome. If one builds on such a site, misfortune will rapidly overtake one.

4. A hole, one cubit deep ( or knee-deep ), should be made in the ground, and a lighted lamp placed therein to determine the 'luck' of the site. It is good if the lamp lights the entire cavity. If it burns dimly, the householder will die. If the flame becomes elongated, then the house will bring prosperity and long life ( to the owner ).

If the flame burns gray (gives forth smoke ?), it will bring prosperity. If it leans towards the east,

there will be prosperity; if towards the S. E., the house shall be burnt; if to the south, there will doubtless be death; if towards the S. W., sorrow shall come; if towards the west, there will be loss of property; if towards the N. W., there will be sickness; if towards the north, prosperity shall come; if towards the N. E.. there shall be an increase in happiness. Thus are indicated the signs with respect to the different points of the compass.

6. From an examination of these names, it appears that they can be arranged in three groups as follows :

a. *Names common to all the mss* : *āyata*, rectangular ; *chaturasra*, square ; *bhadrāsana*, the beautiful site ; *chakra*, shaped like the wheel ; *trikoṇa*, triangular ; *sakaṭa*, shaped like the bullock-cart ; *kurma*, shaped like (the back of) a tortoise ; *dhanu*, shaped like a bow ; *surya*, shaped like the sun ; *daṇḍa*, shaped like a staff.

b. *Names regarding which there has been some typographical error: pralamba*, the elongated one ; *byajana*, like the fan ; *chhatra(?)*, like the umbrella ; *bisamabāhu*, with unequal arms ; *brihanmukha*(?), with a big mouth.

c. *Names which are not common to all the mss* : *Muchhandaka, Mruchhanda, Grihada ; surikta, sumurti ; harmyapitha.*

Of these, *āyata* brings prosperity in all matters ; *chaturasra* brings wealth ; *bhadrāsana* brings satisfaction ; *brita* or *chhatra* brings welfare (?) ; *chakra* brings poverty : *trikoṇa* is the cause of the king's displeasure ; *sakata* brings loss of wealth ; *daṇḍa* brings about the death of cattle ; *pralamba* brings about the death of an elder ; *brihanmukha* brings about the loss of wealth ; *byajana*, the loss of wealth ; *surya*, the loss of wealth and *bisamabāhu*, bereavement.

(the auspicious post), should be set up (indications regarding the future can be drawn from certain sounds heard at the time). This science of sounds, heard during the laying of the thread is being indicated here.

If the thread slips from the hand or is blown off (by the wind), or if anyone happens to make faces at the owner of the house at the time, one should not build there. In that event, even the title of 'householder' shall disappear (i. e. the person will not continue for long to be a householder).

If a cow be seen or heard bellowing towards the north, the site should be known as fit only for *rākshasas* to live upon. A man cannot be prosperous while living in such a place. (Also) if the cow bellows, then know that there is a piece of cow's bone in the ground. Unless it is extracted, the householder shall die. Divide the length of the site (from east to west) into five parts. The bone is in the third division from the east at a level which is waist-deep.

(क) श्लोक सुत्रविस्तार्य्यमानेण मास शब्द सुहते यदि।

## IV. Determination of the Nāga's Position

According to the *silpasāstras*, it is imagined that a great serpent(nāga)lies encircling every building-site. Its body is divided into eight equal portions, namely the head, heart, stomach, navel, anus, knee, shin, ankle and tail. The serpent moreover moves round and round in a clockwise direction. Its head lies at the eastern point of the compass in the middle of the month of Āswina. It takes a year to come round to the same point. It is therefore possible to determine, on any date, where the different limbs of the nāga will lie along the boundary of the site. It is required in the *sāstras* that the auspicious pillar should be posted at certain points of the nāga's body in order to ensure good luck. The orientation of the door is also determined by the lie of the nāga.

8. The nāga lies on its left side. During the months of Bhādra, Āswina and Kārtika, the head lies to the east, the back faces the north, the belly faces the south and the tail (extends from the western point of the compass to the s. E. point ?). It remains in that position for three months.

During the months of Mārgasira, Pousa and Māgha, the head is towards the south, the belly faces the west, the back, the east and the tail (extends from the northern point of

the compass to the s. w. point ?). It remains in that position for three months.

During the months of Phālguna, Chaitra and Baisākha, the head of the nāga is towards the west, the belly faces the north, the back, the south and the tail (extends from the eastern point of the compass to the N. W. point ?). It remains in that position for three months.

During the months of Jaiṣṭhya, Āsāṛha and Srāvaṇa, the head of the nāga lies towards the north, the belly faces the west, the back, the east and the tail (extends from the southern point of the compass to the N. E. point ?). It remains in that position for three months.

9. During the months of Bhādra, Āswina and Kārtika, the head of the nāga lies towards the east. On the first day of this quarter, the head lies exactly at the N. E. point of the compass, while on the last day it lies similarly at the S. E. point. The head of the nāga thus moves one degree every day, in a clockwise direction.

In this connection, it is said in one of the passages quoted above that the nāga covers by its length that portion of the boundary which subtends an angle of $270^0$ at the centre leaving an angle of $90^0$ open. It should be noted however that this does not agree with the opinion quoted in the previous article.

10. Divide the line along which the nāga lies into 8 parts. The first portion forms the nāga's head, while the rest constitute the heart, belly, navel, anus, knee, shin and tail. According to another reading, the length should be divided into 9 equal parts, of which the head is constituted by the first two, the rest being formed by the remaining divisions.

When the position of the nāga has thus been determined, various religious ceremonies are performed before the actual commencement of building-operations.

One of these is the setting up of the auspicious pillar called *subhastambha.* This pillar should only be posted at certain points of the nāga's body.

## XI. Where the pillar should be posted on the nāga's body

11. If the hole for posting the auspicious pillar be dug at the head of the nāga, the wife and children of the householder will die; at the heart and belly, wealth, prosperity and the enjoyment of power will follow; at the navel, the enemies of the householder will be overtaken by misfortune and good luck follow him instead; at the anus, sickness will follow; at the knee, the householder will have to live away from home for a long time, and death shall come if the pillar be posted at either the ankle or the tail.

If the pillar be set up towards the back of the nāga, bereavement will follow, while prosperity will come if it is placed towards its lap.

## XII. Where the door should be fixed with reference to the body of the nāga

(ग) नागविधि द्वारलक्षण॥ नागस्थान स्थान द्वारे विश्वकर्म्मा च भौषित दोषगुण समासाद्य कथितं वास्तुविस्तर॥ अर्थ। नागर स्थान मनि द्वार करिब। एमन्त बोलि विश्वकर्म्मणि बोइले दोषगुण मनि बुझि नाग स्वस्थाने द्वार कले धन-जन बहुत होइ। घर शुभकाले येमन्त नागर आठताल बुझि हृदय जठरे

12. The position of the door should be fixed from the position of the nāga's limbs. Viswakarmā says that if the effects of placing the door-way in relation to the limbs of the nāga are taken into consideration before fixing its position, then great prosperity will be enjoyed by the householder.

Locate the eight limbs of the nāga ; then place the door at either its heart or its stomach. That will bring good luck. In any other case, dangers and strife will follow.

16. If the building-operation is begun on the first day (after either the new or the full moon), one is sure to be overtaken by sorrow; the sixth brings about loss of wealth, while the fifth brings unrest of mind. The tenth causes loss from theft, while the eleventh brings about the king's displeasure. The full moon causes the death of one's wife, while the new moon brings about loss of landed property (?). The fourth, ninth and the fourteenth (commonly known as *rikta*) are responsible for the frustration of all efforts. The second, seventh, third, eighth and thirteenth are favourable for performing the ceremony of the auspicious pillar.

17. The zodiacal sign in which the sun was present during the birth of a person is his birth-sign. That person should not set the auspicious pillar (*i. e.* begin building-operations) when the sun is in the same position. Counting that as one, the third, sixth, tenth and eleventh bring good luck to the builder ; the second, fifth and ninth are also auspicious (after the expiry of the first thirteen days ?). Never begin operations on the first, fourth, seventh, eighth and twelfth signs.

(According to another version) the second brings about loss of wealth ; the third, wealth and prosperity ; the fourth, loss of friends ; the fifth, death of children ; the sixth, acquisition of wealth ; the seventh, division in a household ; the eighth, loss of one's wife ; the ninth, loss of fame ; the tenth, wealth and prosperity ; the eleventh, religious merit ; the twelfth, strife, bereavement and sickness,

22. Now is being indicated the *bandha* with which each apartment should be made. The sanctuary should have *dhwaja* as its *bandha*; the cooking apartments should be of *dhumra bandha*; the state-apartment, of *singha bandha*; the place for husking corn, of *swāna bandha*; the inner apartments, of *brisha bandha*; the stable for horses, elephants and other animals, of *khara bandha*; the store-room should have *gaja* as its *bandha*, while the armoury and soldiers' barracks should be of *dhwānkha bandha*.

It would appear from a consideration of the above passage that the length and breadth of these different apartments of a royal household were chosen in such a manner that the apartments belonged to the eight *bandhas* named above. Ihis was probably considered auspicious and the proper thing to do.

24. Multiply the area of the house (in sq. cubits) by 8 and then divide by 27. The remainder denotes the constellation under which the house (is 'born'). If it is the same as the birth-star of the owner, or if it belong to the *ekapāda* or *tripāda* subdivisions, then the house will bring troubles. There will be happiness, if the star belongs either to the *dwipāda* or *chāripāaa* subdivisjons.

25. Multiply the length of the house by its breadth, multiply the product by 8 and divide by 60. The remainder gives the age of the house. Divide the probable age by 5 (the number of the elements). From the remainder you will be able to find out how the house will be destroyed. If it is 1, the house will never be completely thatched ; if it is 2, water will destroy the house ; if 3, then fire will burn the house ; if 4, the house will be destroyed by a storm ; if 5, the house will be struck by lightning.

26. Multiply the index number of the constellation of the house by 4 and divide by 9. If the quotient is 1, then there will be theft in the house. If it is 2, there will be enjoyment (of wealth) in the house ; if 3, there will be loss of wealth ; if it is 4, the householder will be a munificent person ; if it is 5, the householder will become a king ; if it is 6, there will be an absence of fear ; if it is 7, (the householder will become ?) a hermaphrodite ; if it is 8, there will be poverty ; if it is 9, the house will be a temple. The remainder gives the index number of the zodiacal sign of the house.

30. All doors lying between the N. E. and S. E. points of the compass are said to face the east. Similarly, the south includes all points from S. E. to S. W.; the west includes all points from S.W. to N.W. and the north includes all points from N.W. to N.E. Each of these quarters is again divided into 8 points, and the following 'effects' are said to accompany the disposition of the doors in one or other of these points.

In the eastern quarter, 1 brings danger from fire; 2, the birth of many daughters; 3, great wealth; 4, kingly prosperity; 5, anger; 6, troubles or destruction; 7, weeping; 8, danger from thieves.

In the southern quarter, 1 brings a meagre progeny; 2, meagre wealth; 3, defeat by lowly persons; 4, enjoyment; 5, enjoyment of (good or plenty of?) food; 6, troubles; 7, loss of wealth; 8, disease or loss of progeny.

In the western quarter, 1 brings sickness of childern; 2, trouble from enemies; 3, wealth and progeny; 4, good luck; 5, prosperity; 6, the king's displeasure; 7, sickness and 8, enmity.

In the northern quarter, 1 brings about imprisonment; 2, sickness or trouble from enemies; 3, wealth and progeny; 4, happiness and wealth; 5, loss of happiness and wealth; 6, enmity; 7, loss of domestic animals; 8, death or accidental death.

Place the door in the 3rd or 4th points of the eastern quarter, the 4th or 5th of the southern quarter, the 3rd or 4th of the western quarter or the 3rd or 4th of the northern quarter.

After taking into consideration the day of the week, the phase of the moon, the position of the stars, constellations, sign of the zodiac etc., one should perform the ceremony of posting the auspicious pillar. The owner of the house

should be ceremonially pure; the ceremony should not be performed if he is ceremonially unclean. Dig a hole at the navel (of the nāga) and post the pillar within it. Cleanse the inside of the hole by besmearing it with cow-dung, and place pieces of gold, silver and various gems therein. Also put in a new piece of cloth, a twig of the mango tree and a cocoanut. Fill the water-pot to the brim with water. Worship the gods with incense, lamp, sweet-smelling articles, rice-offerings, betel-leaves and other articles. Worship Viswakarman (the presiding deity of all craftsmen), and read the following *mantra*, "Oh Viswakarman, this is the beginning of my building-operations". The householder should be accompanied by his wife, sons, male and female friends. Then the auspicious pillar should be set upon the auspicious stone. Adorn it with garlands, sandal-wood paste and a piece of new cloth. During the ceremony of posting the pillar, Brahmins should chant the Vedas. Tie an earthen vessel at the top of the post for birds to build their nests therein. At the end of the ceremony, the priest should be offered food and presents. The architect should be offered food, presents and a new piece of cloth. If the ceremony is performed according to these instructions, (the householder) will be prosperous, and his enemies will diminish in number.

37. Avoid the aswattha, khirabriksha, tintiṛi, kanṭaka, baṭa, ṣālmali, uḍumbara and raktapuspa in the following directions respectively: east, S.E., south, S.W., west, N.W., north, N.E. If these are not avoided, the following 'effects' will follow as a result: poverty, dangers, danger from enemies, strife, loss of friends, death and danger from fire.

It is good to plant the following trees within the compound of a house: bael, dāṛimba, kesara, panasa,

nārikela, punnāga, sarala, labanga, champā, nāranga, mālatī, mallikā, mandāra, kunda, and kāmoda. Then health, wealth and progeny will follow.

According to (ग), trees which cause injury when planted towards the south or west, become a source of good luck if they are planted to the east or north of tanks, rivers or temples.

38. If there be water towards the east of the dwelling-house, the son (of the householder) will die. If it is to the S.E., there will be danger from fire ; if it is to the south, enemies will arise; if it is to the S.W., the wife will become corrupt ; if it is to the west, the wife will become quarrelsome ; if it is to the N.W., there will be prosperity. It is good to have water towards the north and N.E. of the dwelling-house.

39. The architect who can correct the angle (*i.e.* the corners) of a building (when there is something wrong with it), should be employed in building a palace. Consult many *silpins* before building a royal palace. Employ as many *silpins* as the work requires. Religious merit will follow.

Viswakarmā says unto Meru, "Listen, oh Meru, the owner of the house should be pure (in a ceremonial sense) and proficient in the customary practices of the land (*āchāra*). The person should be accompanied by his wife and male children. Brahmā, Viswakarmā, the guardian deities of the different quarters and the nine planets should be worshipped. Thus one will acquire the merit obtained by performing a horse-sacrifice. Do not employ unworthy architects or unworthy priests. Just as a man is of no worth if he is a hermaphrodite, so also shall the work so done be fruitless ; moreover one will merely succeed in earning a bad reputation by performing such works."

(क) द्रवहीने यजमानस्य मतहीने रितुया शिल्पिलखहीनस्ता न प्रतिष्ठा समो-रिपु। येँउ यजमान द्रवहीन होइ। येँउ ब्राह्मण मन्त्रहीन होइ। येँउ विन्धानि शिल्पि न जानइ। ताकु न डाकिब। डाकिले कि होइ से प्रतिष्ठा न होइ। रिपु होइ एमन्त से कृति।२८। (५३ पृः)

If the owner of the house has a deficiency of materials, he cannot earn fame by building a temple. The work will be as an enemy to him. Do not employ the architect who does not know the Canons of Architecture (*silpasāstras*). If you employ him, the same thing will follow.

40. After entering the house with proper ceremonies, satisfy the priest with presents. Perform the auspicious ceremony with the good wishes of friends and relations. Read the *Srimad Bhāgabat.* Remember the Lord Jagannath and vow to make certain offerings to him. Keep a copy of the *Bhāgabat* in the house. Under these circumstances, the goddess Lakshmi will never abandon the householder. The *Sudarsana Chakra* will preserve the householder from all dangers.

## XLIII. Geometrical constructions

Certain geometrical figures are drawn upon a block of stone before working on it. The following passages are supposed to refer to some of these constructions. A few *silpins* of Lalitgiri say that they know how to draw these figures, but it has not been possible to learn it from them. The passages have therefore remained untranslated. As far as we know, the *silpins* of Bhubaneswar or Puri do not know how to draw these figures.

If the *piṣṭa*[1] or pedestal be wrongly made, there will be death. (Thus Brahma says what is true). If the *piṣṭa* of the *jagamohan (mukhasāli)* is higher than the *piṣṭa* of the *singhāsana* or the throne of the deity, there will be death. If the *gamā* or the corbelled arch above the door, is shorter than it should be, the architect will become poor. If the *piṭhā* of the *jagamohan* starts at a level higher than that of the *baranḍa* of the *rekha* temple, then the architect will fall ill.

## XLVIII. Merit acquired by building a temple

(क) अश्वमेध शतसहस्रानि वाजपेयशतानि च ततुल्य प्रासादकीर्ति यो निर्म्माण सुखप्रद। अश्वमेध याग सहे सहस्र वेड़ कले येते फल वाजपेय याग सये वेड़ कले तेते फल। ततुल्य होइ प्रसादकृतिकि सरि नो होइ ।२७। (५२-३ पृः)

48. The merit acquired by performing the Horse-sacrifice a hundred thousand times is equal to the merit acquired by performing the *Bājapeya* sacrifice a hundred times. The same is the merit acquired by building a temple ; the former may even be less.

## X. The Different Types of Orissan Temples

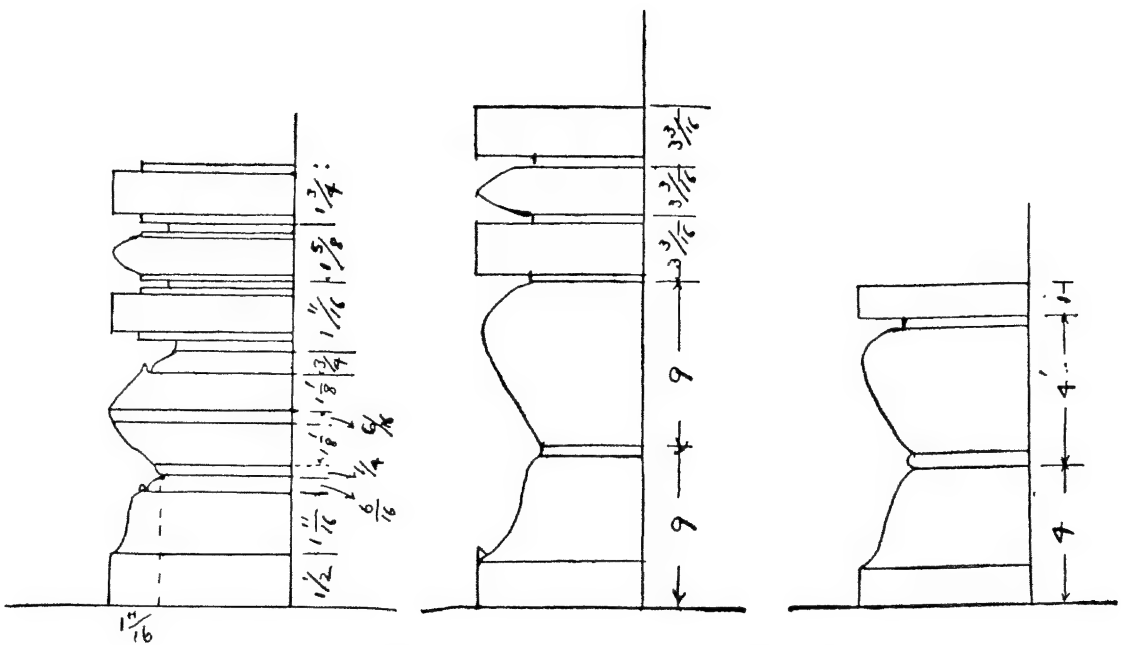
In Orissa, we find altogether four different types of temples, namely Rekha, Bhadra, Khākharā and Gouṛiya. Of these, the first two are very common and are to be found in all parts of the province. The Khākharā type is limited to six examples in Bhubaneswar, but miniatures of this type were very extensively employed as a decorative motif on the body of Rekha or Bhadra temples, and, as such, the type has a wider distribution. Of Gouṛiya temples, we know of only two late examples in the town of Puri; one beside the Mārkaṇḍeya tank and the other at the gateway of the Uttarapārṣa monastery. This style did not influence the Orissan temples in any way, although, in the land of its origin it was itself deeply modified by the influence of the Rekha type. We can therefore treat it as an exotic in Orissa and cease from giving it any further consideration. We have included it among the temples of Orissa, because it has found a place in one of the readings of the *Bhubanapradipa*, where it has been illustrated and referred to us *gauri*, which is a corruption of Gouṛiya.

Let us now proceed to analyse the three prevalent types of Orissan temples and compare them in order to find out their points of similarity and of difference.

The first thing that strikes us regarding these temples is that

(1) the ground-plan of the Rekha and Bhadra is square, while

(2) that of the Khākharā is rectangular.



Different specifications of the pābhāga. §LXVI

The body of all these temples can be divided along the vertical axis into four principal parts namely, the *piṣṭa* or the pedestal, the *bāṭa* or the wall, the *gaṇḍi* or the body and the *maṣṭaka* or the crown.

The *piṣṭa* does not form an essential part of the temple proper, for there are examples in which the *piṣṭa* is absent ; the most conspicuous one being the temple of Lingaraja itself in Bhubaneswar. The *bāṭa* rises vertically up to a certain height, and no distinction can be drawn between the *bāṭas* of the three types of temples. It is only with the *gaṇḍi* that points of difference begin to appear between them.

The *gaṇḍi* of the Rekha rises straight up to a short height and then begins to curve inwards at an increasing rate. The line so formed presents the appearance of a tall bamboo-post which has been slightly bent towards the top by a rope tied tightly at its upper extremity. The cross-section at any point of the *gaṇḍi* is square. The *maṣṭaka* of the Rekha starts from above the *gaṇḍi*. It is composed of several elements, which are all circular in cross-section. Just above the *gaṇḍi* is the *beki* or the throat ; then comes the *amlā* or *āmalaka*, a flattened spheroid, ribbed at the sides and resembling an enormous fruit of the *āmalaki* in appearance. Above the *amlā* comes the *khapuri* or skull, and on it is placed the *kalasa* or water-pot and *āyudha* or the weapon of the deity to whom the temple is consecrated.

In Bhadra temples, the *gaṇḍi* is composed of a number of *piṭhās* or horizontal platforms, piled up in the form of a pyramid. The *pīṭhās* rapidly decrease in size from bottom upwards, in such a manner that the sides

of the pyramid strike the horizontal at an angle of 45° or less. The diminution proceeds until the topmost *piṛhā* is half in size to the lowermost one. The *piṛhās* may be arranged in one or two tiers, with moderate heights of vertical wall intervening between them. Each of these tiers is called a *poṭala*. The cross-section at any point of the *gaṇḍi* is also square as in the case of the Rekha temple. Above the *gaṇḍi* comes the *masṭaka*, composed of several elements which are circular in cross-section. First comes the *beki*, then the *ghaṇṭā*, an enormous ribbed structure shaped like a bell. On the top of the *ghaṇṭā* is a succession of *beki, amlā, khapuri, kalasa* and *āyudha* as in the Rekha.

The *gaṇḍi* of the Khākharā is composed either like that of a Rekha as in the Vaitāl temple in Bhubaneswar or like that of a Bhadra, with certain minor differences, as in the temple of Gauri in the same village. The cross-section all through is however rectangular. The *masṭaka* is composed of one or two *khākharās*, this being a structure resembling a rectangular parallelopiped with the vertical sides substituted by *cyma reversa*. The vertical sides may curve inwards either along one horizontal axis only, or along both. In the former case, the cross-section of the *masṭaka*, at different heights above the base, is reduced from those lying below it only in the matter of its width, the length remaining the same at all heights. In the other case, it is reduced both in length and in width. An example of the former is afforded by the temple of Vaitāl, and the other by the Gauri temple in Bhubaneswar. One or more miniature *amlās* may be placed along the crest of the *khākharā*, or there might be a

*kalasa* in the middle with figures of crouchant lions at both sides placed instead.

Each type of temple is subdivided into four classes according to the *silpasāstras*. The walls of the temple inside are kept rigorously plain, but the outer walls are modified by the addition of certain projections upon them. These projections run along the entire height of the temple up to the end of the *gandi* and partake of all movements, either of projection or of depression, suffered by the wall itself. In certain instances, they might also have certain characteristics not appearing on the wall of the temple.

If there be one projection, the wall becomes divided into three *rathakas* or *pagas*, two of which lie in the same plane, the other being disposed a little forward. A temple in which the central *paga* has been once more treated in this manner, will have five pagas on its face ; such an example being called *pancha-ratha* (the one having five *rathakas* or *pagas*). So also a temple might have seven or even nine *pagas*, according as the treatment is repeated three or four times on the central *paga*.

It may be useful to point out, at this stage, that in the *silpasāstras*, there are specifications of 55 Rekha, 6 Bhadra and 3 Khākharā temples. The 55 Rekhas are divided into two classes according to the construction of their *bāta* or wall. They are otherwise identical in regard to the structure of their vertical components. The only points of difference between them lie in the relative proportion of their *pagas* and the number of ornamental spires which adorn them.

In the *silpasāstras*, we find the following passages

regarding the classification of temples according to the number of their *pagas*.

49. Salutations to Sri Ganesha. Let there be no hindrance (to this undertaking). Thus (begins) in the *Bhubanapradipa*, which was recited by the sage Viswakarmā in the forest of Naimisha, (a description of) the characteristics of palaces (meaning temples in the present case) . . . Now (we are) to know how many *rathakas* characterise the (different) classes of temples. The Brahmin (is characterised) by nine, the Kshatriya by seven, the Vaisya by five and the Sudra by three *rathakas*. If one builds a *nabaratha* temple, which is Brahmin (by caste), then the manes of the person will dwell in the region of Brahman, the Supreme Being. If one builds a *saptaratha* temple, one's manes will verily live in the Surya and Chandra-lokas. If a Vaishya builds a *pancharatha* temple, (or perhaps, more correctly, if one builds a *pancharatha* temple), then one's manes will dwell in the region of the Rudras. (If one builds) a Sudra or *triratha* temple, then one's manes will dwell in the region of the Moon.

## XI. On Pedestals

### L. The eight pedestals

(क) एवे पिष्ट जानिमा। पद्मनाम यथा पिष्ट। सिंहस्त्रिपि विधियते। भद्रदेवोकुम्भक्षत।४५। सुथिरक खुर कुम्भ भवेत।४६।···परिजङ्घ चाष्टोपिष्ठे नवमे क्रम (कूर्म्म ?) पिष्ठ फालक। (५८ पृः)

(ख) पद्मनाम जथा पुष्ट। सिंहस्त्रिपी वोधियतेः। भद्रवेदी कुम्भख्यात। सुन्दर खुर कुम्भ भवेत। (२२-३ पृः)

50. Now (we are) to know the *pisṭas*, viz. Padma, Singha, Bhadra, Bedi, Suthira, Khura, Kumbha, Parijāngha and Kurma.

It will be seen later on that the Kumbha and Kurma *pisṭas* are in fact identical; so the number of *pisṭas* actually amounts to eight only.

### LI. Padma pisṭa

It is said in (क) that the Padma *pisṭa* should be used in the following temples: Mahā-kailāsa (P. 110), Garuṛa (p. 118), Dui-padma (P. 138), Sreetaru (P. 142), Mahā-meru (Pp. 149 and 157) and Meru (P. 179). Its specifications are given below.

(च) ता १० खुराभाग ३ दलझरा भा ४ केलरि भा २ फेड़ा भाग १ गाए पद्मभाग १० ।

It has not been possible for us to arrive at any definite conclusion regarding the form of the Padma *piṣṭa*, for no satisfactory explanation of the terms *dalajharā* and *ardhapheṭā* are available.

According to the *silpins*, a Padma *piṣṭa* should be composed of three elements, the higher ones being set back inwards as shown in the accompanying photograph. A line drawn touching the outer edges of the mouldings, in such a case, strikes the horizontal at an acute angle. We do not know, however, if it is really the Padma *piṣṭa* of the *silpasāstras* or not.

## LII. Singha piṣṭa

According to (क) the Singha *piṣṭa* should be used in connection with the throne of the deity, as also under the following temples: Ratnasāra (Pp. 115,117,144), Mula-sribachha (Pp. 145, 163) and Mandara (Pp. 149,158). Its specifications are given below.

## LIII. Khura pisṭa

According to ( क ), the Khura *pisṭa* should be used in the Nalini-bhadra (P. 126), Sribachha khandasāla (P. 141), Kritidushana (P. 142), Nisara (X. 146) and Aṣṭa-sree temples (P. 180).

53. The Khura *piṣṭa* (is used to) adorn all temples of the twice-born caste (or "O twice-born one, the Khura *piṣṭa* adorns all temples").

The *muhāṇṭi* or base of the *khurā* should be 2, the *khurā* (or *kumbha*) 5, the *peṭā* 1 and the *basanta* 1 or 2.

## LIV. Parijāngha piṣṭa

According to (क), the Parijāngha *piṣṭa* should be used in connection with the following temples : Baṛabhi (Pp. 135,176), Mahā Baṛabhi (P. 136) and Mahā Draviṛa (Pp. 137,168). Its specifications are given below.

(क) परिजंघपिष्ट खुरा पटा भाग ५ जंघा भाग ६ वसन्त भाग ३ गाए परिजंघपिष्ट भाग १४। (१४३ पृः)

54. The specifications of the Parijāngha *piṣṭa* are as follows: *khurā* 5, *jāngha* 6 and *basanta* 3; total 14.

## LV. Kaṇi piṣṭa

According to ( क ), the Kani *piṣṭa* should be used in the Drabibāna temple (P. 156). There is a drawing in (ङ), which gives the proportion of the mouldings as 4 : 5 : 6. But in ( च ), we find the following specification.

(च) कणिपिष्ट भाग १८ खुरा भाग ७ कणि भाग ६ वसन्त भाग ५ गाए भाग १८

55. (If the total be 15, then the) *khurā* is 4, *kaṇi* 5 and *basanta* 6 ; or *khurā* 6, *kaṇi* 5, *basanta* 4. (If, however, the sum be 18, then) the *khurā* is 7, *kaṇi* 6 (but in the accompanying diagram we find a *noli* used instead of a *kaṇi*), and the *basanta* 5.

## LVI. Bedi piṣṭa

According to ( क ), the Bedi *piṣṭa* should be used in connection with the Purṇasālā temple (P. 146).

(क) वेदिपिष्ट खुरानोलि भाग ४ पटा भाग १ कणिभाग २ उपर दलझरा भाग २ गाए वेदिपिष्ट भाग ६ ( १४७ पृः )

In the accompanying diagram however the proportions are given as 4 : 1 : 1 : 2 : 2.

56. The sum-total of the different elements of the Bedi *piṣṭa* is 9, of which the following are the details : *khurā* 3

(or 4 as in the diagram), *noli* 1, *paṭā* 1, *kani* 2, *upara dalajharā* or *basanta*, 2.

## LVII. Bhadra piṣṭa

The Bhadra *piṣṭa* should be used in the Kailāsa temple according to ( क ).

(क) भद्रपिष्ट खुराभाग ६ जांघ भाग ६ वसन्त भाग ६ गाए भद्रपिष्ट भाग १८ ( १४८ पृः )

(ङ) भद्रपिष्ट भाग १८ खुरा भाग ६ जांघ भाग ६ वरण्ड भाग ३ वसन्त भाग ३ गाए भाग १८ सरि

57. The sum of the different elements of the Bhadra *piṣṭa* is 18, of which the *khurā* covers 6, the *jāngha* 6 and the *basanta* 6 parts. According to the diagram accompanying the specification given in (ङ) the *basanta* can also be replaced by two mouldings of equal height.

## LVIII. Suthira piṣṭa or Sundara piṣṭa

The Suthira *piṣṭa* should be used with the Sarbāngasundara (P. 161) and Medini-bijaya temples (P. 163) according to (क).

(In an accompanying diagram, however, we find the following mouldings instead, *khurā, paṭā, noli* and *basanta*.)

58. The Suthira *piṣṭa* should be composed of 9 parts, of which the *khurā* should be 4 (or *khurā* 2, *kalasa* 2), *paṭā* (or *noli*) 1 and *basanta* 2.

## LIX. Kumbha piṣṭa or Kurma piṣṭa

According to (क), the Kumbha *piṣṭa* should be used in connection with the following temples : Kailāsa (P. 119), Bimāna (Pp. 140, 155), Biharāsara (Pp. 147, 160) and Sarbāngasundara (P. 161).

(क) कुम्भपिष्ट खुराभाग २ कलस भाग २ कान्टिभाग १ अधारिपटा भाग २ कान्टि भाग आगु १ गाए कुम्भपिष्ट भाग ६ ( १४७ पृः )

There is an accompanying diagram which, however, gives the proportion of the mouldings as *khurā* 2, *noli* 2, *paṭā* 2 (?), *barandi* 1, *basanta* 2.

59. Of the total 9 parts forming the Kumbha *piṣṭa*, the *khurā* is formed by 2, the *kalasa* by 2, the *andhāri paṭā* by 2, the *barandi* by 1 and the *basanta* by 2 parts.

## XII. The Rekha Temple :

### General Apportionment of Parts.

It has been pointed out in a previous chapter that the horizontal components of a Rekha temple have little relation to the vertical components. We shall therefore deal with the vertical and the horizontal components in separate chapters.

### LX. Names of vertical segments and the meaning of the terms

From an examination of the accompanying plate, it will be evident that the *bāṛa* of the Rekha temple is composed of a number of broad subdivisions, each of which is capable of being resolved into a number of finer elements. The principal components of the *bāṛa* are the *pābhāga* or the division corresponding to the foot (*i. e.* the base), the *jāngha* or the shin and the *baranḍa*, which is a set of mouldings crowning the *bāṛa*.

The *ganḍi* (lit. the trunk of the body) or the curvilinear tower is composed of different elements along the various *pagas*. The construction also varies in different varieties of the Rekha temple ; but in all of them, one feature is common, viz. that the outermost *paga* is subdivided into a number of *bhumis* or planes, each of which is composed of a number of mouldings surmounted by a miniature *amlā*, called the *bhumi-amlā* or *amlā* of the plane. The other *pagas* may have *sikharas* or miniatures of Rekha temples carved upon them for the sake of decoration.

After the *gaṇḍi* comes the *bisama* (lit. the irregular one), which is also called the *bedi* or altar. The curvilinear tower ends with the *bedi*, and is followed by the *mastaka*.

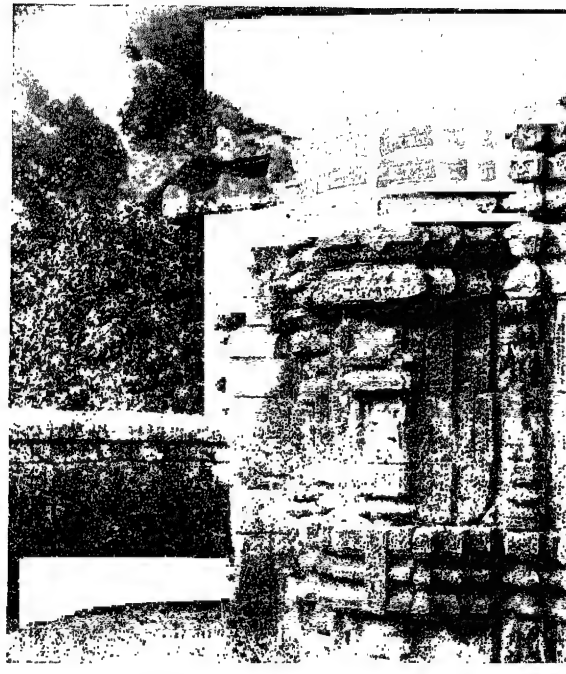
The *mastaka* (a name which has been coined for the sake of convenience) is made up of the *beki* or throat, followed by the *amlā* and the *khapuri* or skull ; this being surmounted by a *kalasa* or water-pot and the *āyudha* or weapon of the deity to whom the temple is consecrated.

It is clear from a study of the above terms that the Rekha temple has been likened to the human body. This conception of the temple is even more clear in the traditional saying of the *silpins* that the Rekha is male and the Bhadra female, attached to one another in a state of sexual union. But there is nothing in the *silpasāstras* to support the traditional view except a meagre reference in (৬) to a certain Rekha temple as the *pungsa bimāna* or the male temple.

The other concept which has also entered in the construction of the Rekha temple is that of a mountain. *Sikhara* literally means the peak of a mountain ; so that, when a temple is described as having *sikharas* upon it, the artist was evidently thinking of it as something akin to a mountain.

## LXI. A proposed classification according to the nature of the bāṛa

In the *silpasāstras*, Rekha temples have not been classified according to their vertical components, still we shall try to do so on the basis of certain observed facts.



*Bāndhanā, upar jāngha* and *bārāṇḍā*
Sari Deul, Bhubaneśwar

From an examination of the temples of Bhubaneswar, it appears that all the temples which can definitely be assigned to a comparatively earlier epoch on the evidence of epigraphy or sculptural style, have a *bāṛa* composed of three elements, vix. *pābhāga*, *jāngha* and *baranḍa*. There are as many as sixteen or seventeen temples of this order in the village of Bhubaneswar itself.[1] It is only in the later temples that we find the *bāṛa* being divided into five portions, namely the *pābhāga*, the *tala jāngha* or lower *jāngha*, the *bāndhanā* or the bond, the *upar jāngha* or the upper *jāngha* and the *baranḍa*.

In subsequent quotations from the *silpasāstras*, it will be found that Rekha temples having three elements in their *bāṛa* have a ratio of 1 : 3 between the length of the *garbha* or sanctum and the total height of the temple. But this ratio increases from 1 : 4 to 1 : 5 or more in the case of Rekhas having five elements in their *bāṛa*. It might even increase to about 1 : 7 as in the temples of Konarak or Puri.

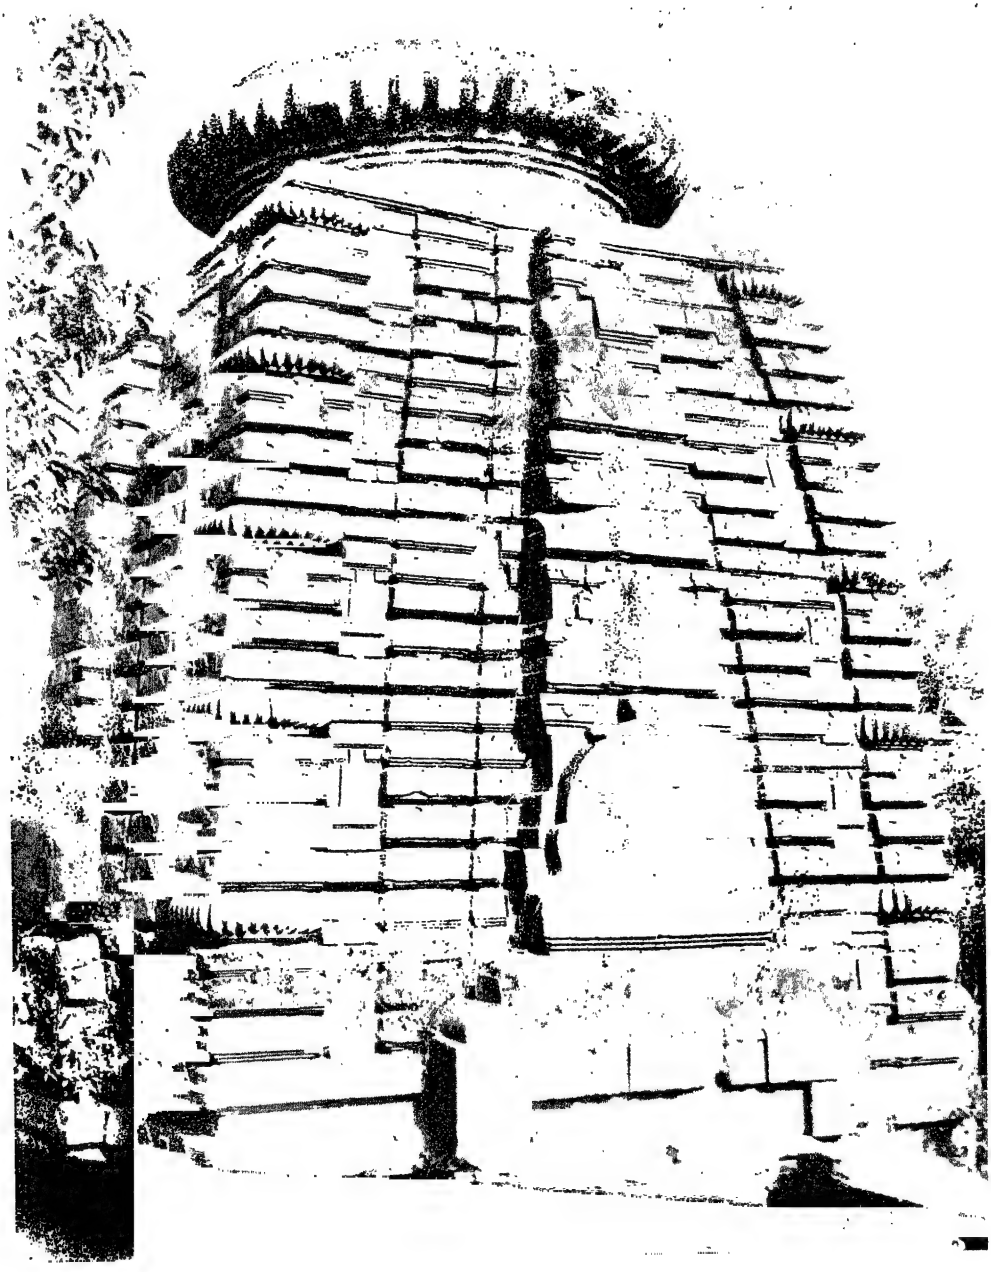
The *tri-anga* (a name coined to denote a three-segmented) *bāṛa* has a wider distribution than the *pancha-anga bāṛa* in Orissa. The temples of Khiching and Baud belong to the former variety ; so do the temples of Telkupi in the neighbouring district of Manbhum.

1 These temples are also characterisd by the following traits :
(1) an absence of accompanying Bhadra temples,
(2) an absence of *sikharas* in the *gandi*,
(3) a depression demarcating the *bāṛa* from the *gaṇḍi*,
(4) an ornamental pilaster before the frontal *rāha paga*,
(5) the presence, in many cases, of an octagonal structure in place of the *kalasa* at the top. This object has been described as a *lingam* by Banerji.

The *panchānga* variety, though more numerous, is limited in distribution. It is also exemplified by one temple in Telkupi, which is traditionally said to have been built by the Gajapati King of Puri and where, even to this day, the ceremony of Chhātā-parab is performed in his name. As the inclusive area of the *tri-anga* type in Orissa is wider than that of the *panchānga* variety, which is central in distribution with reference to it, we can definitely conclude that the *tri-anga* is the earlier Orissan type of *bāṛa*, the *pānchānga* being a development of later origin.

It may be noted in this connection that outside Orissa, the *tri-anga* type of *bāṛa* has a much wider distribution than the *panchānga* type. The former appears in Bajaura in the Punjab Himalayas ; at Osian in Rajputana ; in miniature shrines at Sarnath and Vindhyachal in the United Provinces ; in similar miniatures at Jubbulpore in the Central Provinces ; in certain temples at Omkareswar, Orchha and Ujjain in Central India and at Sāripalli in the Vizagapatam district. The *panchānga* type of *bāṛa* appears locally, outside Orissa, at Baijnath and Chamba in the Punjab Himalayas and at Khajuraho in Central India. Hence we can reasonably conclude that the *trianga* type of *bāṛa* is something earlier and different from the *panchānga* type, which arose locally in certain restricted areas and never came to be as widely distributed as the earlier *tri-anga* type.

In their present form, the *silpasāstras* seem to have been codified after the development of the *panchānga* type in Orissa, when the *tri-anga* type had already fallen into oblivion. For there are only two references to the



*Gaṇḍi* of Mohini Temple, Bhubaneśwar

latter in one rescension of the *Bhubanapradipa* and even there, it has suffered considerably from insufficiency and subsequent mutilation.

## LXII. Specifications of a tri-anga Rekha temple

62. In the Dui-padma temple, the *garbha* is 1 *kāṭhi* or 16 ān. in length; the *pisṭa* is 4, *pābhāga* 6, *jāngha* 13, *barandi* 2, the *sandati* 2 ān. wide. In this manner, build the temple as a *pancharatha* one. In front, place figures of Nāga-females; (carve) petals; at the side of the *khākharā-mundi*, place figures of female Nāgas and the *gelabāi* scroll-work. In the *anuratha paga*, make it so. In the *rāhā paga*, at the level of the *pābhāga*, build a *sikhara*; on both sides of which, place niches. On both sides, carve the *gelabāi* and figures of lions. Beside that, place figures of female Nāgas. Beneath the *baranda*, (carve) reversed petals pointing towards the roof.

## LXIII. The tri-anga Ratnasara

(क) रत्नसार प्रसद हातक प्रभ काठि आङ्गुले १६ पाभाग ४ जांघ ८ फुल-मुण्डी वरण २ रेखगण्डी २५ वेदि २ वेक अला कपुरि होइ पा ५ कलस ४

63. In the Ratnasāra temple, the *garbha* being one cubit or 16 ān., the *pābhaga* should be 4, the *jāngha* 8, the *baranḍa* (of *phula-muṇḍi* type ?) 2, the *rekha-gaṇḍi* 25, the *bedi* 2, *beki, amlā* and *khapuri* together equal to 5, the *kalasa* 4 and the discus 3. ··· in relation to the garbha (which is 16), the wall should be ··· in thickness.

It is clear from the above passage that the height of the *tri-anga* Ratnasāra temple is 3 times the length of the *garbha*. In *panchānga* temples, this ratio rises from 1 : 4 to 1 : 5 and above.

(See No. 17 in Chapter XV. for the horizontal specifications of this temple.)

## LXIV. The general apportionment of parts in panchānga Rekha temples

By the height of a temple is meant the distance between the base of the *piṣṭa* and the top of the *khapuri*. The following is a list of all the different types of Rekha temples which we find in the *Bhubanapradipa*.

## LXV. Different specifications for bāṛas of the panchanga type.

The *bāṛa* of the Rekha can be divided according to one of the four following specifications ; the proportion of the *pābhāga* : *tala jangha* : *bāndhanā* : *upar jāngha* : *baranḍa* being

(1) 6 : 5 : 2 : 5 ; 6 or (2) 6 : $4^1/_2$ : 2 : $4^1/_2$ : 6 or

(3) 6 : 5 : $1^1/_2$ : 5 : 6 or (4) 5 : 4 : $1^1/_2$ : 4 : 5.

## XIII. The Rekha Temple :

### Detailed vertical specifications

It must be borne in mind that all the following measurements refer to a temple of which the *garbha* is 16 ān.×16 ān., except where otherwise stated. The unit of measurement is an ān.

66. The ratio of the different mouldings of the *pābhāga*, viz. the *khurā*, *kumbha*, *paṭā*, *kani* and *basanta* will be according to one of the following tables :

(1) $1^{7}/_{8} : 1^{5}/_{8} : \frac{13^{1}/_{4}}{16} : \frac{13^{1}/_{4}}{16} : \frac{13^{1}/_{4}}{16}$

(2) $1^{7}/_{8} : 1^{5}/_{8} : \frac{13^{3}/_{8}}{16} : \frac{13^{3}/_{8}}{16} : \frac{13^{3}/_{8}}{16}$

(5) $4 : 4 : 3^{3}/_{16} : 3^{3}/_{16} : 3^{3}/_{16}$

The batter of the *khurā* will be equal to its height If the *kalasa* be $1^{5}/_{8}$, its batter will be $1^{1}/_{8}$.

The *pābhāga* illustrated in the accompanying plate has the following dimensions ; the *muhānṭi* of the *khurā* is $1^{1}/_{2}$, the *khurā* is ?, the *piṭhā* $^{3}/_{8}$, the *muchuli* $^{1}/_{4}$ (?), the total height of the *khurā* being $3^{13}/_{16}$. Its batter is $1^{11}/_{16}$ ān. In the *kalasa*, the *damā* is $1^{1}/_{8}$, *ḍori* $^{3}/_{8}$, *kāndha* $1^{1}/_{2}$, *paṭi* $^{3}/_{4}$, their sum being $3^{1}/_{2}$ ān. The *paṭā* and *kani* are each $1^{5}/_{8}$ ān. high. The *basanta* is $1^{3}/_{4}$ ān. ; the sum of the five mouldings being $12^{1}/_{8}$ ān.

In practice, it is however found, that the *baranḍa* is usually composed of five or seven mouldings except in the case of temples of very large dimensions.

74. (As the batter of the different *bhumis* has been set forth in the next article, we shall here speak only of their height.)

If the *garbha* be 16 ān. in length, the *rekha-gaṇḍi* should be 36 ān. high. There should be ten *bhumis*, with an additional one called the *bisama*. Each *bhumi* should be divided into 6 equal portions, of which five should be formed by ordinary mouldings (*bhumi-baraṇḍi*) and one by the *bhumi-amlā* moulding.

The height of the different *bhumis* is given below.

In *pancharatha* temples, we generally find three *sikharas* in the *anuratha paga*. The first *sikhara* should be equal to 4 *bhumis* in height, the second equal to 3 and the third also equal to 3 (?) *bhumis*.

## LXXV. The curvature of the gaṇḍi

There are two general rules for finding the batter of the different *pagas* in the *gaṇḍi*. The batter of the *kanika paga* alone might be given. As the ratio between the different *pagas* is known, the width of each *paga* at the end of each *bhumi* can easily be found out. In the second instance, the ratio between the batter of the different *pagas* might be indicated ; so that, if one of them be known, the rest might also be found out.

75. The batter of the different *bhumis* in the *kanika paga* should be as follows (the measurements are given in āngulas) :

| 1st. | 2nd | 3rd | 4th | 5th | 6th | 7th | 8th | 9th | 10th | Bisama |
|---|---|---|---|---|---|---|---|---|---|---|

| nil | 1/16 | 1/16 | 1/8 | 3/8 | 7/32 | 1/4 | 3/8 | 7/16 | 3/4 | 2 |

a. In the *naba-ratha* Mandara temple, the ratio between the batters of the *rāhā, anurāhā, anuratha, pariratha,* and *kanika pagas* is as 5 : 4 : 3 : 2 : 1.

b. In the *sapta-ratha* Barabhi, the *kanika* should have a batter of 2 ān., the *anuratha* half of that, the *anurāhā* half of that, the *rāhā* half of that.

c. In the *pancharatha* Mahā Barabhi, the *anuratha* should have a batter half that of the *kanika*. The batter of the *rāhā* should be equal to that of the *anuratha*.

d. The sum of the batters of the *gaṇḍi* and the *bisama* should be 4 ān., on each side.

e. According to another version, the batter of the *gaṇḍi* should be 3 ān. and that of the *bisama* $2^1/_2$ ān.

## LXXVIII. Meaning of the term "Rekhaguṇāghāṭa"

In the following chapter, it will be observed that in the specification given for each temple, a certain measurement is referred to as *rekhaguṇāghāṭa.* The *rekhaguṇāghāṭa* is the sum, in āngulas, of the set-back of the *gaṇḍi* from the *baraṇḍa,* the batter of the *gaṇḍi* and that of the *bisama.* The following passage in (च) explains the matter clearly.

| | | | |

## LXXIX. Meaning of the term "bhumi"

With reference to Rekha temples, we shall often come across such statements as "the Mandara consists of 20 *bhumis*". In such cases, the *piṣṭa, pābhāga, tala jāngha, bāndhanā, upar jāngha, baranḍa, bisama, beki, amlā* and *khapuri* are also counted as so many *bhumis*. In the present instance these altogether constitute 10 *bhumis* ; so that there remain 10 more for the *gandi* itself. Similarly, if the total number of *bhumis* be given as 15, it should be taken to mean that the *gandi* of that temple consists of 5 *bhumis* only.

The *beki* should be set back 4 ān. from the edge of the *bisama*. The projection of each *tripāṭi* should be 1 ān. The projection of the *amlā* from the base of the *beki* should be 4, or according to another version 5 ān. The *muhānṭi* of the *khapuri* should start from a point 1 or $1^1/_2$ ān. behind the top of the *amlā*. The batter of the *khapuri* should be 4 or 3 ān. From the top-end of the *khapuri*, the *pāda* of the *kalasa* should be set back $5^1/_2$ ān.

82. According to one opinion, the *pāda* of the *kalasa* is included in the height given for the *kalasa*; while according to another, it should be treated as an independent element.

a. In the opinion of the first school, the *pāda* of the *kalasa* should be 2 ān., the *damā* $2^1/_4$ or 2, the *ḍori* $^1/_2$, 1 or $^1/_2$, the *chāngaṭā* $2^1/_4$ or 2, the *kāṇṭi* 1 and the *ghaṭi* 1 ān. in height. The *kalasa-pāda* should be 4 ān. $\times$ 4 ān.

b. According to the other school, the *kalasa-pāda* should be 3, the *kalasa* 8 and the *chakra* (in the case of a Vishnu temple) 5. There should also be a *muchuli* between the *kalasa* and its *pāda*, which should be $^1/_4$ ān. in height. If the *kalasa-pāda* be 2, its *muhāṇṭi* should be 1 and the batter 1 ān. It should be square, with sides equal to $3^{15}/_{16}$ or 6 ān. in length.

On the *kalasa*, which is 8 ān. in height, there may also be placed a *ghaṭi*, 2 ān. high. The flag at the top of the temple should be 5 ān. wide and 15 ān. long.

## XIV. The Rekha Temple :
### Certain details of construction

### LXXXIII. Thickness of the walls

With reference to Rekha temples of the *panchānga* type, it has been said in the *silpasāstras* that the length from *kanika* to *kanika* on the outside should be twice the length of the *garbha*.

(क) मधारकु षोड़ आङ्गुल मधारु वाड़ १६ आङ्गुल ॥ ( ३६ पृः )

83. From the centre (of the *garbha*) to the outside of the *bāṛa* is 16 ān. In the Mahā Baṛabhi, Garuṛa, Ratnasāra and Sribachha-khaṇḍasāla, the length the *garbha* being 16 ān., the two walls should also be 16 ān.

If the *garbha* be 1 cubit, the two walls should together be 1 cubit. (The same is true of temples having 9 cubits or 11 cubits as the length of the *garbha*. As a matter

of fact, it is a general rule applicable to all *panchānga* Rekha temples, except in certain specified cases. Two such exceptions are noted below.)

## LXXXIV. Two exceptions to the above rule

(क) वृषभ भाग देउल काठि आङ्गुले १६···कनिक वाड़ वहल होइव ६ आङ्गुल ६ ॥ (१३८ पृः)

विवान भाग ग्रह काठि आंगुल १६···वाड़ वहल छ आ ६ करिब ॥ श्री ॥ (१३९ पृः)

84. In the Brishava temple, the *garbha* being 1 kāthi or 16 ān. square, the wall should be 6 ān. thick.

In the Bibāna, the *garbha* being 1 kāthi or 16 ān. square the wall should be made 6 ān. thick.

## LXXXV. Construction of the interior

It will be seen from the accompanying plate, which is that of a ruined Rekha temple at Telkupi in Manbhum, that after the tower has risen to a certain height, a horizontal course of stones is laid across the walls to form a roof over the sanctuary or *garbha*. The temple is of the *tri-anga* type and has only 5 bhumis in the *gandi*, with a *bisama* at the top. A similar course of stones has also been laid immediately after the third *bhumi*, thus forming another chamber above the *garbha*. According to the *silpins*, the lower course of stones is called *garbha-muda*, while the upper one is called *ratna-muda*.

From the structural point of view, these horizontal courses serve a very useful purpose, functioning as tie-plates between the otherwise insecure sides of the Rekha temple.

## LXXXVI. The corbelled arch above the lintel

It is interesting to note that the architects of Orissa resorted to the method of building a corbelled arch above the lintel, on the inside of the door, in order to reduce the weight to be supported by the lintel. According to the *silpins* of Lalitgiri in Cuttack, this particular arch is called the *gamā* ; but the term seems to have been used in a different sense in the *silpasāstras.* An illustration of the arch is given from a ruined temple situated in the neighbourhood of the Satrughneswar temple in Bhubaneswar.

In Orissa, the corbelled arch is screened from outside view by a continuation of the ornamental face-stone ; but in certain temples in Manbhum, built both of stone and of brick, these arches are not so covered up and can be seen from outside. In the latter, the lintel has actually been dispensed with.

## LXXXVII. The Paga and Dhara

The *paga* has already been defined as a segment produced on the outer face of a temple, if part of the face is subjected to projection. All *pagas*, except the *kanika* at the corner, may have edges carved upon them, these being technically known as *dhāra.* Each *paga* has a specified name in the *silpasāstras.* There are two systems of nomenclature; one of which has now fallen out of use, while the other is employed by *silpins* to the present day.

The central *paga* is known as *rāhā* according to one system and as *go-ratha* or *madhya-ratha* according to the other. Both systems of nomenclature are given below in tabular form.

| | |
|---|---|
| *Triratha* | *Rāhā, Kanika.* |
| *Pancharatha* | *Rāhā, Anuratha, Kanika.* |
| *Saptaratha* | *Rāhā, Anurāhā, Anuratha, Kanika.* |
| *Nabaratha* | *Rāhā, Anurāhā, Anuratha, Pariratha, Kanika.* |
| *Triratha* | *Goratha* or *Madhyaratha, Kanyāsa.* |
| *Pancharatha* | *Goratha, Anuratha, Kanyāsa.* |
| *Saptaratha* | *Goratha, Uparatha, Anuratha, Kanyāsa.* |
| *Nabaratha* | *Goratha, Uparatha, Anuratha, Pariratha, Kanyāsa.* |

The second series has been used in connection with mutilated descriptions of the temples in Sanskrit verse; so that this is evidently the one which was formerly in vogue.

## LXXXVIII. A note on the subsequent measurements

In course of the following chapter, we shall come across certain usages peculiar to the *silpasāstras*. Thus in the *nabaratha* Kshetra-bhusana temple (p. 132), it has been that it should consist of 22 *bhāgas* or divisions. In the accompanying drawing, we find, two sets of figures beside the *pagas*. Of these, the figures inside represent the relative proportion of the *pagas*. Thus the *rāhā* is given as $2^1/_2$, the *anurāhā* as 2, the *anuratha* as $1^1/_2$, the *pariratha* as 2 and the *kanika* as 3. These altogether make 11; twice that is 22, the number of *bhāgas* ascribed to the temple. When building the temple, therefore, we should measure the outside length from *kanika* to *kanika*, divide it into 22 parts and assign to each *paga*, the required number of parts.

The figures given above the *pagas* in the same drawing, which is that of half the ground-plan, indicate, in āngulas,

the amount of projection of each *paga* from the one immediately behind it. Thus, in the present instance, the *rāhā* projects 1 1/2 ān. from the *anurāhā*, which projects 1 ān. from the *anuratha*, which projects 1/2 ān. from the *pariratha*, which finally projects 1/4 ān. from the *kanika paga*.

## LXXXIX. A note on the distribution of sikharas

In many *pancharatha* temples in Orissa, we find three *sikharas* in each *anuratha paga*, and one *sikhara* of considerable size just above the junction of the Rekha and the Bhadra, set upon the face of the *rāhā paga*. This makes a total of 24 and 1 *sikharas*. In such temples, the number of *sikharas* is given in the *silpasāstras* as 24, so that the one at the junction is generally left out of account.

In the succeeding specifications, the number of *sikharas* which should adorn each particular temple is frequently given ; but as their distribution has not always been indicated, it has not been possible to arrive at a satisfactory reconstruction of all the temples described herein. The meaning of the terms *pusangkara* or *pungsakara* and *kuṭa*, which have been used in this connection, are also obscure.

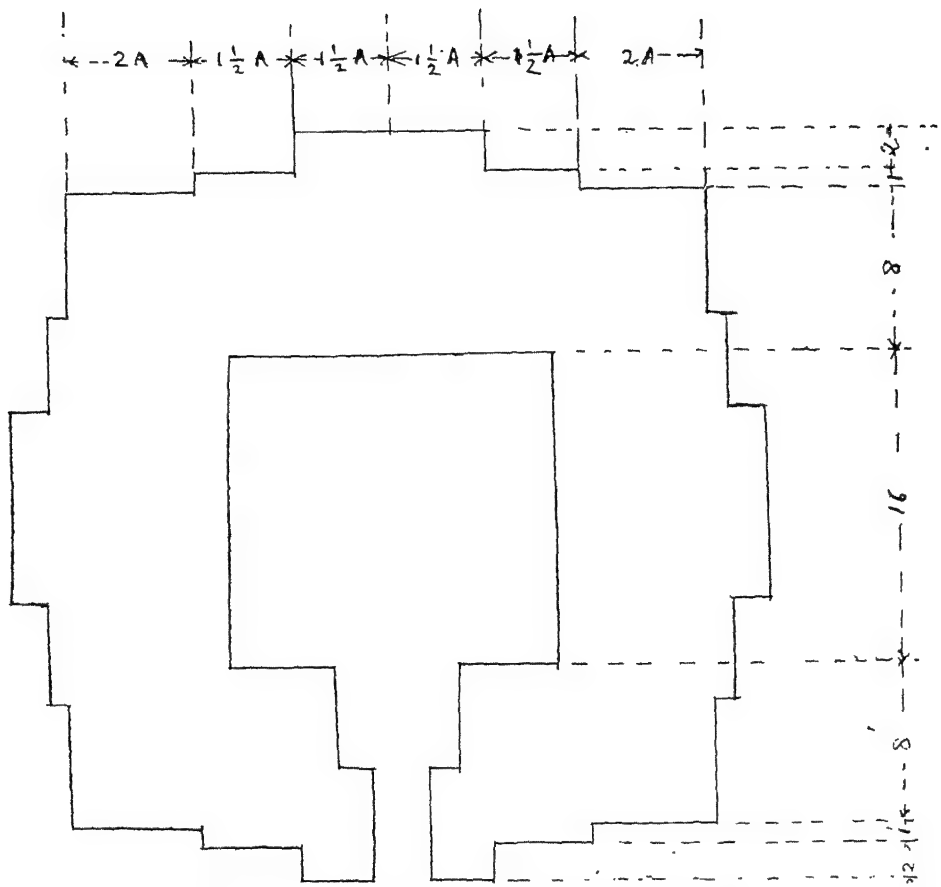
90. Names of the thirty-six temples—Mahā Meru, Mandara, Kailāsa, Bhadra, Dibidāna, Kesari, Srivatsa, Nandivardhana, Chitrakuṭa, Subarnakuṭa, Padmasila (?), Kritidushana, Ratnasundara, Bihasṭa-indra, Kshetra-bhusana (?), Sarbāngasundara, Sritaru, Nichasā, Mulasri, Hangsa, Dribidāna, Garuṛa, Laghubimāna, Astasri, Padmakāra, Kalpataru, Ratnasāra, Laghuseka, Mādhabī, Nāgari, Kosoli, Birāṭi, Basanta and Surālaya.

It is interesting to note that some of the names have a geographical significance. Thus Kosoli and Birāṭi are evidently connected with the countries of Kosala and Virāṭ ; while Nāgari probably refers to Nagara, which is supposed by some scholars to mean Pataliputra, the chief city of the Magadha Empire.



Ground-plan of the *pancharatha* Kailās Temple.

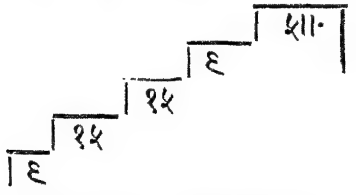
Although the number of temples has been given here as thirty-six, we shall find that the number of temples actually described in the *silpasāstras* far exceeds the specified number.

## Nabaratha temples

1. ASTASRI :

(क) अष्टश्रीभाग १० रथक ६ भूमि २० सिखर ६४ पुंसकर २५६ कुटवार रेखगुणा २ खुरपिष्ट ( १०७ पृः )

(छ) अटश्री भाग ११ रथक ६ सिखर नास्ति



( १८३ पृः )

The Aṣṭasri consists of 10 *bhāgas*, 9 *rathakas*, 20 *bhumis*, the *rekhagunāghāṭa* is 2 ān., the number of *pusangkara* 256 *kuṭabāra*. (It should be set upon the) Khura *piṣṭa*.

According to another version, the numbers of *bhāgas* should be 11, and the temple should be without any *sikharas*.

Two figures are given ; in one, the ratio of the *rathakas* is shown as 16-5-8-5-16, in another as $5^1/_2$-9-15-15-9. But these do not agree with the given number of divisions or *bhāgas* of the temple.

2. BAHANTISARA :

(ग) बहन्तिसर भाग ५६ रथक ६ सिखर च ६५ भूमिरे मुण्डि १६० १० ( रथक ) १०-८-६-४-४ ( मेलाण ) २-१॥०-१-॥० रेखगुणाघाठ १३ ( ६० पृः )

The number of *bhāgas* in the Bahantisara is 56, *rathakas* 9, *sikharas* 65 (*cha* probably stands for *chausathi*, 64 ; the additional one being the *sikhara* placed in the *rāhā*). The total number of *muṇḍis* in the *bhumis* is 160.

In the accompanying illustration of the ground-plan, the proportion of the *rathakaṣ* is given as 10-8-6-4-4 ; their projection being 2-1$^1/_2$-1-$^1/_2$ ān. The *rekhagunāghāṭa* is given as 13, which is doubtful.

3. BAHARGAMASARA (this may be a corruption of the preceding name) :

(ख) वहर्गमसर भा ५६ रथक भा ९ सिखर भा ६४ भूमिरे मुण्डि १०० गण्डि भूईभाग १० ( रथक ) १०-५-५-४-४ ( मेलाण ) २-१-।।०-।० ( १८३ पृः )

In the Bahargamasara, the number of *bhāgas* is 56, *rathakas* 9, *sikharas* 64, and the number of *bhumis* in the *gaṇḍi* is 10. In the ground-plan, the *rathakas* have been shown in the ratio of 10-5-5-4-4, with the following projections, 2-1-$^1/_2$-$^1/_4$ ān.

4. BARABHI :

(ख) बड़भी भा २८ रथक भा ९ सिखर नास्ति रेखागुणिघाट ४ ( रथक ) १०-५-८-४-४ ( १८४ पृः )

The number of *bhāgas* in the Barabhi is 28, *rathakas* 9 ; there should be no *sikharas*. The *rekhagunāghāṭa* is 4 ān. In the plan, the *rathakas* have been shown in the ratio of 10-5-8-4-4.

5. BIHARASARA :

(क) बिहग्यसर भाग ६४ रथक ९ सिखर ६४ अनुरथे चारि सिखर नेखाए ३२ कनिकरे तिनि सिखर लेखाए २४ राहारे दुइ सिखर लेखाए ८ गाए चउषठि सि

The Biharāsara consists of 64 *bhāgas*, 9 *rathakas*, 64 *sikharas*, 20 *bhumis*, and is set upon the Kumbha *piṣṭa*. Its *rekhagunāghāṭa* is 2 ān. The ratio of the *rathakas* is 8-3-6-3-12 and the projections are 2-1-$^{3}/_{4}$-$^{1}/_{2}$ or 2-1-$^{1}/_{2}$-$^{1}/_{4}$ ān.

In the *anuratha*, there should be 32 *sikharas*, at the rate of 4 in each ; in the *kanika*, there should be 24 at the rate of 3 in each ; in the *rāhā*, there should be 8 at the rate of 2 in each ; thus making the total number of *sikharas* 64.

6. BISWAKARMA :

The *āsana* or ground-plan should consist of 32 *bhāgas*. From *kanika* to *kanika*, (the length) should be divided into 32 parts. The *kanyāsa* should be 3 ; the *anuratha* 3, the *pariratha* 5, the *uparatha* 1$^{1}/_{2}$, the *madhyaratha* 9. (Here the total length of the *rāhā paga* is given, instead of that of its half as in the previous examples.)

7. CHITRAKUTA :

The Chitrakuṭa should consist of 19 *bhāgas*, 9 *rathakas*, 20 *bhumis*. It should have 64 *sikharas* and its *rekhagunāghāṭa* should be 2 ān. In the *kanika paga*, there should be 32 *sikharas*, at the rate of 4 in each. In the *anuratha*, there should be 24, at the rate of 3 in each ; while in the *rāhā* there should be 8, at the rate of 2 in each (half).

The *rathakas* are in the ratio of $5\text{-}1^1/_2\text{-}5\text{-}1^1/_2\text{-}5$, the projections being $^3/_4\text{-}^3/_4\text{-x-}^1/_2$ or $\text{x-}1\text{-}1\text{-}^1/_2$ or $1^1/_2\text{-}1\text{-}^3/_4\text{-}^1/_2$ ān.

At the corners, there should be 36 *sikharas*. In the *anuratha*, there should be 24, at the rate of 8 in each, and in the *rāhā* there should be 4 ; thus making a total of 64 *sikharas*.

The Kailāsa consists of 104 *bhāgas*, 9 *rathakas*, 64 *sikharas*, 20 *bhumis*, and is set upon the Bhadra *piṣṭa*. The *rekhagunāghāṭa* is $2^1/_2$ or 2 ān. The ratio of the *rathakas* is 12-10-25-10-35 or 12-10-25-10-4 (24?). Their projections are $2\text{-}1\text{-}^1/_2\text{-}^1/_4$ or $2\text{-}1\text{-}^3/_4\text{-}^1/_2$ ān.

It shall bear 24 *sikharas* in the *kanika*, 24 in the *anuratha*, 8 at the sides of the *rāhā*, 4 in the middle of the *rāhā*. The last 4 should start from the middle of the *baranḍa* (i. e. from a point below the commencement of the *gaṇḍi*.)

There is another incomplete specification for the Kailāsa, as given below.

(ख) अथ कैलास भाग ४६ रथक भाग ६ सिखर भाग ४० रेख उ घाठ भाग ३॥० ( ७८ पृः )

Now, the Kailāsa consists of 49 *bhāgas*, 9 *rathakas*, 40 *sikharas*, and its *rekhagunāghāṭa* is $3^1/_2$ ān.

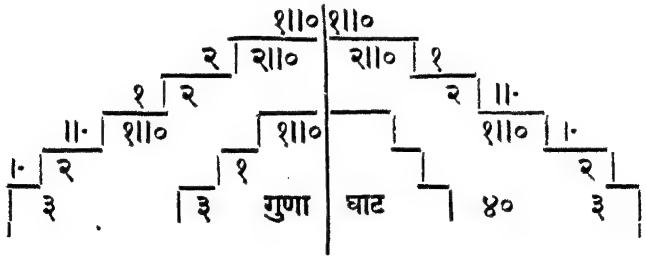
The Kailāsa consists of 48 *bhāgas*.....the *kanyāsa* is equal to 8, the *anuratha* half of that, the *pariratha* equal

to 3, the *uparatha* 5.....the *madhyaratha* 19 (This however makes the total 50 instead of 48).

11. KSHETRABHUSANA :

(छ) क्षन्तभूसण भाग २२ रथक सिखर ३२ कुम्भ कनिक कणरे दस भाग १० भूँइ १० चारि कणे ४० रथक ९



The Kshetrabhusana consists of 22 *bhāgas*, 9 *rathakas*, 32 *sikharas*. At the corner of the *kanika*, there should be *kumbhās*. In ten *bhumis*, therefore, there should altogether be 40 *kumbhas*.

From the accompanying figure we find that the proportion of the *rathakas* should be $2^1/_2$-2-$1^1/_2$-2-3 and their projections $1^1/_2$-1-$^1/_2$-$^1/_4$ ān.

This temple presents a very interesting feature. It will be noticed from the ground-plan that the side of the *garbha* has also been indented, instead of being kept plain. Moreover, *kumbhas* have been set at the corner of each *bhumi* in the *kanika paga*. Now, we do not find a single instance of this type in Orissa itself. But the temples of Udaipur, Jaipur (Amber), Ujjain and other places in Western and North-western India have this feature as one of their prevailing characteristics.

The Mahā Meru consists of 112 *bhāgas*, 9 *rathakas*, 64 *sikharas*. The ratio of the *pagas* is 24-3-7-9-25, and their projections are 2-1-$^1/_2$-$^1/_4$ or 2-1$^1/_2$-1-$^3/_4$ ān. The *rekhagunāghāṭa* should be 1 ān.. and the temple should be placed upon the Padma *piṣṭa*.

At the sides of the *kanika*, there should be 32 *sikharas* at the rate of 4 *sikharas* in each (here the term *mundi* has been used in the sense of *sikharas*). In the *anuratha*, there should be 24, at the rate of 3 in each ; these should start from the level of the *baranḍa* in the *bāṛa*. In the *rāhā*, there should be 8 *sikharas*, at the rate of 2 in each.

According to another version, the Mahā Meru consists of 112 *bhāgas*, 9 *rathakas*, 64 *sikharas* and 36 *khajuriyā kuṭas*, making a total of 100 *mundis* and *sikharas*. The ratio of the *rathakas* is 12-12-10-10-12, while the projections are $1^{1}/_{2}$-1-$^{3}/_{4}$-$^{1}/_{2}$ ān. The *rekhagunāghāṭa* is 4 ān. (ख and छ give the number of *sikharas* as 40.)

The number of *bhāgas* in the Mandara is 64 and of *rathakas* 9. In one drawing of the ground-plan, the ratio of the *rathakas* has been given as 12-3-5-3-6, their projections being 2-1-$^1/_2$-$^1/_4$ ān. ; while in another, it is 12-3-5-3-4, the projections being 2-1$^1/_2$-1-$^3/_4$ ān. The *rekhagunāghāṭa* is 2$^1/_2$ ān. or 2 ān. There should be 20 *bhumis*, i. e. 10 in the *gaṇḍi*. The temple should be set upon the Singha *piṣṭa*.

The number of *sikharas* is 64. At the 8 corners, there should be 24 *sikharas* ; in the *anuratha*, at the rate of 3, there should be 24 ; in the *anurāhā*, at the rate of 1, there should be 8 ; in the *rāhā* there should be 4 ; the total number of *sikharas* thus being 64.

(In the *gāṇḍi*), the lowermost *sikhara*, being equal to 5 *bhumis* in height, should be 15 ān. high. The second one, being equal to 4 *bhumis*, should be 12 ān. high. The third *sikharas*, being equal to 3 *bhumis*, should be 9 ān. high ; thus making the total height of the three *sikharas* equal to 36, which is the same as the height of the *gaṇḍi*.

(From the text it is not possible to determine with certainty if the present temple is of the Rekha or Bhadra type. In support of the former, we get the mention of *rekhaguṇā-ghāṭa* as a distinctive proof. But when it is said in connection with the disposition of the *sikharas*, that 20 *sikharas* should be placed at the "corners of the *kānṭi* between the *poṭalas*, which consist of *piṭhās*," our position becomes doubtful, as this might be taken as an equally conclusive proof of the temple being of the Bhadra type. We have therefore translated the text just as it stands).

The Bimāna consists of 10 *bhāgas*, 5 *rathakas*, 18 *bhumis*, 24 *sikharas*. It should be set upon the Kurma *piṣṭa*. Its *rekhaguṇāghāṭa* is 3 ān. 20 *sikharas* should be set at the corners of the *kānṭi* separating the *poṭalas*, which consist of *piṭhās*. In the *rāhā* there should be 4 *sikharas*, making the total number of *sikharas* 24. The *rathakas* are in the following ratio 3-1$^1/_2$-2, their projections being 2-1 ān.

## XVI. The Bhadra Temple: General Considerations.

### XCI. Other names of the Bhadra temple

The Bhadra is also called the Mukhasālā (lit. the building which is placed towards the face or front of the Rekha), or Piṛhā temple on account of its *gaṇḍi* being composed of *piṛhās*.

(क) देउल गोटिए करिब। मुकुसालि जोड़िए करिब। तँहिकि पाचिरिटिए करिब। कले कि होइ ताहा जाणिमा। कोटिए कुल पर्य्यन्त स्वर्गारोहण हुअन्ति। (७६ पृः)

91. Build one (Rekha) temple. Buke two *mukhasālās* (in front of it). Erect a wall round the whole. One should know what follows from such works. One's descendants up to the ten-millionth remove will ascend to heaven.

### XCII. Gainthiāla

The Rekha and Bhadra are joined to each other in a very intimate manner. The junction between the two is called the *gainṭhiāla*, which literally means a ceremonial knot tied between the garments of the bride and the bride-groom during the marriage ceremony. According to the traditional view, the Rekha being male and the Bhadra female, they should be joined to each other like man and wife in a state of sexual union. There is nothing in the *silpasāstras* however to support the above view.

The following passage occurs in the *silpasāstras* with reference to the *gainṭhiāla*.

(छ) गइठिआल ९ आङ्गुल दुइ पा १० पछ। ( १४६ पृः )

The *gainṭhiāla* is $9^1/_2$ ān. set back.

## XCIII. Relation between the Rekha and the Bhadra

(क) रेखर पिष्ट द्रिघ ३६ आंगुल॥ प्रति चालिसि आंगुल ४० ॥ तहि आगे भद्रपिष्ट द्रिघ बइआलिसि आंगुल ४२ ॥ प्रति चउरालिसि आङ्गुल ४४ ॥ गाए दुइ दउलर पिष्ट समुचा होइँ द्रीघ अठस्तरि आङ्गुल ७८ ॥ ( १२५-६ )

a. The *piṣṭa* of the Rekha is 36 ān. long and 40 broad. In front of that, the *piṣṭa* of the Bhadra is 42 ān. long and 44 broad. The total length of the *piṣṭas* of the two temples is therefore 78 ān.

## XCIV. Meaning of term 'gamā'

The term *gamā* has been used in connection with the junction between the Rekha and the Bhadra, but the meaning of it is still obscure. The *silpins* of Lalitgiri however use the term to refer to the corbelled arch placed over the lintel; but that seems to be a wrong use of the term *gamā*.

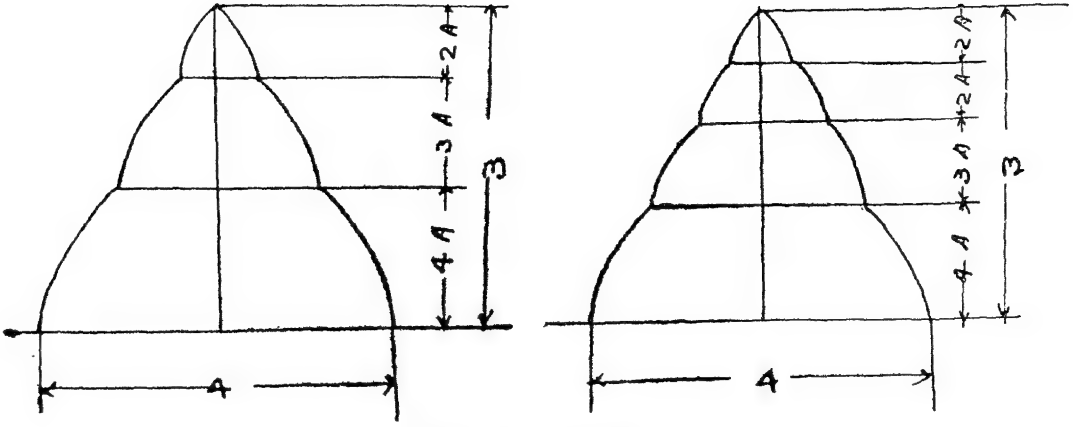
## XCV. Classification of Bhadra temples

As a rule, the topmost *piṭhā* in the *gaṇḍi* of a Bhadra temple is half in length to the lowermost one. If the temple be of large size, it might require a considerable number of *piṭhās* to bring this about. An unbroken series of *piṭhās* does not present a good appearance. In such cases, therefore, *piṭhās* are grouped into a number of *poṭalas*,



The Torana. §XCIX

each of which consists of 5 or more *piṛhās*. The *poṭalas* are separated from one another by short heights of vertical wall called *kānṭi*.

As the *rāhā* projects forward, its upper half, or part of that, is replaced by a miniature Bhadra *mastaka*, with the *ghanṭā* and *kalasa* complete. Accordingly, in a Bhadra having one *poṭala*, there would be 4 small *ghanṭās* in the *gandi* besides the regular one at the top. It is therefore called *panchaghanṭā* or the one having 5 *ghanṭās*. A Bhadra having two *poṭalas* will similarly have 9 *ghanṭās* and would be called *nabaghanṭā*. A Bhadra might also be *trayodasa-ghanṭā* if it has three *poṭalas*, as in the temple of Konārak.

## XVII. The Bhadra Temple
### Specification of different examples

XCVI. We find reference to the following Bhadra temples in the Silpasastras :

Bhadra, Mahā Bhadra, Bijayā Bhadra, Nalini Bhadra, Medinibijaya, Mahādraviṛā, Kesari and Kesara.

1. BHADRA :

(क) भद्रभाग हाथ १६ आंगुल प्रभकु बाड़ वहल ८ बाड़ उच्च १६ पिड़ा उच्च पोटल ८ काण्टि ॥० दुतिअ पोटल वेक ॥० पा आहि उच्च १॥० मेलाण २ घण्टा उच्च ३ मारिब ३ वेक पाए अएला दुइ पा ॥० कपुरि ॥० कलस छ ६ पिड़ा मेलाण दुइ २ लेखाए ४॥॥० भूमि जाणिमा पिष्ठभूमि पाभागकु भू २ जांघ ३ बांधणा ४ ए उपरजाङ्घ ५ वरण ६ प्रथम पोटोल काण्ठी १ दुतिअ पोटोल ७ वेक ३ स्राहि ६ घण्टा ५ काण्ठि २ अला चा ४ एहाकु भद्रभाग बोलि ॥५३॥ भद्र भा ३४ रथक ६ सिखर ६४ भूमि २० वेदिपिष्ट (रथक) ३-३-४-३-४ (मेलाण) २-१-॥०-।० (११३ पृः)

If the *garbha* of the Bhadra be 16 ān. in length, its walls should be 8 ān. thick (i. e. each wall should be 4 ān. thick, giving a total of 8 ān. for the two sides). The *bāṛa* should be 16 ān. high, the *srāhi* should be $1^1/_2$ ān. high, with a projection of 2 ān. outwards. The *ghanṭā* is 3 ān. high, its batter being 3 ān. The *beki* is $^1/_4$, *amlā* $^1/_2$, *khapuri* $^1/_2$ and the *kalasa* 6 ān. The projection of the *piṭhā* (from the *bāṛa*) is 2 ān. on each side, i. e. 4 ān. in all. Now (these are) the bhumis : *piṣṭa*, *pābhāga* 2nd., *jāngha* 3rd., *bāndhanā* 4th., the *upar jāngha* 5th.,

the *baranḍa* 6th., the first *poṭala*, the *kāṇṭi*, the second *poṭala*., *beki*, *srāhi ghaṇṭā*., *kāṇṭi*, *amlā*. This is called the specification of the Bhadra temple. (It should be set upon a Bedi *piṣṭa*.

The Bhadra consists of 34 *bhāgas*, 9 *rathakas*, 64 *sikharas*, 20 *bhumis*. The *rathakas* are in the ratio of 3-3-4-3-4, their projections being 2-1-$^1/_2$-$^1/_4$ ān.

The Bhadra consists of 34 *bhāgas*, 9 *rathakas*, 64 *sikharas* and 20 *bhumis*. The *rathakas* are in the ratio of 3-3-4-3-4, their projections being 2-1$^1/_2$-1-$^3/_4$ ān. Now, we are to know where the *sikharas* should be disposed in the body of the Bhadra. In the *rāhā*, in front, there should be a *sikhara* set upon the *piṭhās*. At the corners of the *rāhā*, there should be two *sikharas* making a total of three for the *rāhā*. In the other *rāhā*, (that one on the opposite side ?), there should be similarly 3 *sikharas*; making a total of 6 *sikharas* for the *rāhās*. At the corners of the *anuratha*, *anurāhā* and *kanika*, there should also be *sikharas*. A *sikhara* should be placed in the middle

of the *pariratha*. The *anurāhā*, *anuratha*, *pariratha*, shauld bear *sikharas* in the middle. Now, we are to know how they should be disposed. If the first *poṭala* consist of 5 *piṭhās*, then the *beki-srāhi-ghanṭa* should be equal to 3 *piṭhās* in height (this is evidently with reference to the miniature *piṭha-mastaka* to be set in the *gandi*).

(Thus end the specifications of the Sribachha Khandasāla. To this should be added a *panchaghanṭā* Bhadra. How, that one is to know. As the *garbha* of the Rekha is 16 ān. long, that of the Bhadra should be 20 ān. long. Each of the *rāhā* and *anurāhā* should be $2^1/_4$ ān. wide, making the total $4^1/_2$ ān. The length from *kanika* to *kanika* should be $35^1/_2$ ān. (in the *gandi* perhaps). In this temple, the two *paṭalas* should be 20 ān. high. The projection of

the *piṭhā* from the *bāṭa* should be $2^1/_2$ ān.. Each *piṭhā* is $2^1/_2$ ān. high and its batter is $2^1/_2$ ān.. The *kānṭi* is $1^1/_2$ ān.. The *piṭhās* are 7 (in number). The *beki* is $1^1/_2$ ān. high, the *srāhi* 2, with a projection of $2^1/_2$ ān.. The *ghanṭā* is 4 ān.. The *beki* (below the *amlā*) is $^1/_2$...(the projection of the *amlā* is) 1 ān.. The *khapuri* above is 1 ān. high, with a batter of 1 ān.. The *kalasa* is 6 ān. high.

(In this temple) the *bāṭa* is 18 ān., the two *poṭalas* 20, the *srāhi, ghanṭā, beki, amlā* and *khapuri* 14 ; the total of these items being $54^1/_2$ ān.. (In the *gaṇḍi*, which consists of two *poṭalas*, it is said that) the *piṭhās* (constituting the first *poṭala*) should be 10 ān. high ; the *kānṭi* $1^1/_2$, the upper *poṭala*. . . . , the sum of the two being $18^1/_2$ ān.. The *kanika paga* should have a batter of $4^1/_2$ ān., that of the *anuratha* being half i. e. 2 ān..

The batter of the *rāhā* should also be 2 ān.. If the temple be not made *panchaghanṭā* (i. e. if no miniature *ghanṭā*s are set upon the *gaṇḍi*), then the batter of the *anuratha* should be half that of the *kanika* ; while that of the *rāhā* should be half of that of the *anuratha*.

If the *garbha* of the Rekha be (1) 6, then that of the Bhadra is 20. The *pābhāga* should be $4^1/_2$, *jāngha* $3^3/_4$, *bāndhanā* $1^1/_2$, *upar jāngha* $3^3/_4$, *baranḍa* $4^1/_2$. From *kanika* to *kanika* the length will be ..... (There should be) 7 *piṛhās*. The two *poṭalas* will be 10 ān. high (?). The *beki* is $1^1/_2$ ān. high ; the *srāhi* $1^1/_2$. Its projection will be 2 ān.. The *ghanṭā* should be set back $^5/_8$ ān. from the edge of the *srāhi*. The *ghanṭa* should be 3 ān. high. . . . . ; the *amlā* should be 1 ān. high, its projection being $1^1/_4$ ān.. The *khapuri* should be set back 1 ān. from the edge of the *amlā*. There should be a *kalasa* for the Bhadra (set upon the *khapuri*). Its height, including that of the *pāda* (which is here called the *khurā*) should be $6^3/_4$ ān..

The length (of the *gaṇḍi* from) *kanika* to *kanika* at the top of the *poṭala* should be half the length from *kanika* to *kanika* at the base. Thus ends the specification of the Bhadra. It the temple is of the *panchaghanṭā* type then the batter of the *rāhā* should be equal to the batter of the sides (i. e. the *kanika* ?).

2. A detailed specification is also given for the *gaṇḍi* of the Bhadra as follows :

In the case of a Bhadra having a *garbha* equal to hāta and 12 āngulas in length, the first *piṭhā*, from *kanika* to *kanika*, should be 7 hātās 12 āngulas long. The second *piṭhā* should be 7 hātas 4 āngulas 4 sutās in length; its projection being 2 ān. 15 su., its height being $6^1/_2$ ān.. The third *piṭhā* is 6 hā. 10 ān., and 5 ān. 13 su. thick. The projection is $6^3/_4$ ān. ($2^3/_4$ ?). The fourth *piṭhā* is 6 hā. 3 ān. $10^1/_2$ su.. Its projection is $2^1/_2$ān.. The sixth *piṭhā* is 5 hā. $7^1/_4$ ān.. It is 5 hā. $1^1/_2$ su. in thickness. Its projection is 2 ān. 11 su.. The seventh *piṭhā* is 5 hā. 1 su. in length; the thickness being 4 ān. 13 su. and the projection 2 ān. 5 su.. The eighth *piṭhā* is 4 hā. 12 ān. long, 4 ān. 13 su. thick and has a projection of $2^1/_4$ ān.. The ninth *piṭhā* is 4 hā. 6 ān. 10 su. long, and has a projection of 2 ān. 6 su.. The tenth *piṭhā* is 4 hā. 2 ān. 2 su. long, 1 ān. $4^1/_2$ su. (?) thick. The eleventh *piṭhā* is 3 hā. $13^1/_2$ ān. long, X ān. and $13^1/_2$ su. thick, and its projection is 2 ān.. The twelfth *piṭhā* is 3 hā. 8 ān. 2 su.,

long, 3 ān. 9$^1/_2$ su. broad and it has a projection of 1 ān. 12 su.. The thirteenth *piṛhā* is 3 hā. 4 ān. 10 su., the thickness being 3 ān. 5$^1/_2$ su.. The projection is 1$^1/_2$ ān..

The *beki* should be 13 an. 1 su. (?) set back from the *muhanṭi* of the *piṛhā*. The *beki* should be 4$^1/_2$ ān.. The *srāhi* is 5 ān. 10 su. high.

The Mahābhadra has a *garbha* equal to 16 ān. in length. The *piṣṭa* is 6 ān., the *bāṭa* 6$^1/_2$ (?) . . . . . the *beki* is $^3/_4$ ; the *srāhi* 2, with a projection of 2 ān.. On it is the *ghanṭā* 4 ān. high. The *beki* is $^1/_4$ ; the *amlā*, $^3/_4$, the *khapuri* $^3/_4$ with a batter equal to $^3/_4$ ān.. The *kalasa* is 5 ān. high. Get at the meaning of these specifications fully and then build (the temple). The *rāhā* and the *anuratha* should project 8 ān. (?) . . . . The *goratha* should be 6, the *uparatha* half of that (again, the *uparatha* is said to be equal to 4), the *anuratha* 2, the *pariratha*. . . . . (It is said again that the *uparatha* is 4, the *anuratha* half of that). There should be 64 *sikharas*. . . .

3. BIJAYABHADRA :

According to ( ) and ( ) the Bijayābhadra should be used with the following Rekha temples, Ratnasāra, Duipadma and Mahā Meru

(क) ( with refenence to Ratnasāra ) आगरे विजआभद्र करिब। भद्रभाग ३४ ( ११५ पृः )

In front (of the Ratnasāra) build the Bijayābhadra. It has 34 *bhāgas.*

(क) ( with reference to the Duipadma ) विजआभद्र करिब सेइ सप्तरथ। भद्र कले तिनि पोटल करिब। ए नारदवचन। श्री। ( १३७ पृः )

(In front of the Duipadma) build the *Bijayābhadra* temple, which should be of the *saptaratha* type. In this Bhadra, make three *poṭalas* (in the *gaṇḍi*). This is the saying of Nārada.

(छ) ( रथक ) १॥०-१॥।J०-२ ( मेलाण ) २-० विजयभदर बोलि एहाकु ( २१७ पृः )

This is called the Bijayābhadra. The ratio of the *rathakas* is $1^1/_2$-$1^3/_4$-2 and their projections are 2—0 ān..

याति रेख एहाकु वियया भदर ( २२४ पृः )

With reference to the Mahā-Meru, it is said it is of the Rekha type and with it there should be the Bijayā-bhadra temple.

4. KESARI (?) :

It is doubtful if the following temple is of the Bhadra type ; for, in connection with its details, the term *rekhaguṇāghāṭa* has also been used. We have therefore left the passages as they stand, without being able to come to any definite conclusion regarding its form.

The Nalinibhadra consists of 18 *bhāgas,* the *kainasā* being 3 (half of six).....

This is called the Nalinibhadra.....

The *pisṭa* of the Nalinibhadra is 6 ān. high. It should be a Khura *pisṭa*...From the *pisṭa*, the *bāṭa* should be set back 2 ān.. In the *bāṭa*, the *pābhāga* is $4^3/_4$ ān.. The *pābhāga* should consist of five mouldings, the *khurā*, including *muchuli*, is 1 ān. 6 su. ; the *kalasa*, 1 an. 2 su., the *paṭā*, 12su., the *kaṇi* 12 su., the *basanta* 12 su.. The sum of the five mouldings in the *pābhāga* is thus $4^3/_4$ ān..

The *talajāngha* is $3^3/_4$ ān.. In it should be placed *khākharā muṇḍis.*

The *bāndhana* is $1^3/_4$ ān. high, and is formed of three mouldings. The *baraṇḍi* is $9^1/_4$ su., the *noli* 9 su. and the *basanta* $9^1/_4$ su....

The *upar jangha* is $3^3/_4$ ān.. In it place a *piṭhā-muṇḍi.*

The *baranḍa* is $4^3/_4$ in height. In it there should be ten mouldings. The ten mouldings are of equal height. At first comes the *baranḍi*, which is $7^1/_2$ su., the *pheni* is $10^1/_2$ su., the *paṭā* is $10^1/_2$ su., the *kaṇi* is $10^1/_2$ su., the *noli* is $10^1/_2$ su., the *paṭā* is $10^1/_2$ su., the *noli* is $10^1/_2$ su., the *kaṇi* is $10^1/_2$ su, the *noli* is $10^1/_2$ su., the *basanta* is $11^1/_2$ su.. the total height of the *bāṛa* (including the *ṭāngha*) is $18^3/_4$ ān..

The *ganḍi* which consists of five *piṛhās* is 20ān. high. The Projection of the *piṛhās* from the *bāṛa* is 2 ān. on each side. The first *piṛhā* is $4^1/_4$ ān. high (including the *kānṭi*, which is $^1/_2$ ān.). The batter is $4^1/_4$ ān.. The second *piṛhā* is set back 2 ān., from the (edge of the) first. The second *piṛhā* is 4 ān. high, including the *kānṭi* which is $^1/_2$ ān.. The batter up to the base of the *kānṭi* is $3^1/_2$ ān.. The third *piṛhā* is $3^3/_4$ ān. high. The big *kānṭi* (which follows now) is 1 ān., in height. The batter up to the *kānṭi* is 5 (?) ān.. The fourth *piṛhā* is set back $1^1/_2$ ān. from the third. The *piṛhā* should be $3^1/_2$ ān. high. This height includes that of the *kānṭi*, which is $^1/_2$ ān. high. The batter is $4^1/_2$ ān.. The fifth *piṛhā* is set back 2 ān. from the fourth. The fifth *piṛhā* is $3^1/_2$ ān. high, and its batter is $3^3/_4$ ān..

From that, the *beki* should be set back $3^1/_4$ ān.. The *beki*, including the *tripāṭis*, is $3^1/_2$ ān. high. The *srāhi* is $3^3/_4$ ān. high. Its projection is $3^3/_4$ ān.. The *muhānṭi* of the *khapuri* is $^3/_4$ ān.. behind the edge of the *srāhi*. The *muhānṭi* is $^3/_4$ ān. high. The height of the *khapuri*, including that of the *muhānṭi*, is $2^1/_2$ ān., The batter of the *khapuri* should be $2^1/_4$ ān.. The *ḍori* is $^1/_2$ ān.. Placed upon it, the *khapuri* is $1^1/_2$ ān. high, and its batter is $1^3/_4$ ān..

The *kānṭi* of the *amlā* is set back 1/2 ān., its height being 1/2 ān.. The height of the *amlā* is 1 ān., and its projection 1 1/4 ān.. From the *amlā*, the *muhānṭi* of the *khapuri* is set back 3/4 ān.. The height of the *khapuri*, including that of the *muhānṭi*, is 1 1/4 ān.. The batter of the *khapuri* is 1 3/4 āngulas.

The *vāda* of the *kalasa* is set back 1 1/4 ān. from the *khapuri*, its height being 1 1/4 ān.. After this is the *muchuli*, which is 1/4 ān. high. The *damā* of the *kalasa* is 2 1/4 ān., the *ḍori* 1/4, the *chāngaṭā* 2 1/2. The *ghaṭi* is 1 ān. high ; thus bringing the total height of the *kalasa* to 6 ān..

The total height of the Bhadra is three and three-fourths of a cubit. . .

The Draviṛā and the Baṛabhi are *triratha*....

The length of the *garbha* of the Dravirā should be 16 ān. and the breadth 12 ān.. The *pābhāga* is 5, the *jāngha* 8, the *kerā* 2, the *pākhuṛā* 2, the *baraṇḍi* 2. The *gaṇḍi* is 16 ān.. On it is the 'muchuli at the shoulder,' which is 2 ān. in height. Then comes the *kāṇṭi* $^1/_2$ ān. high. The *siāhi* (here the term *kalasa* has been used in this sense) is 2 ān., the *kaṇṭi* on it being $^1/_2$ ān.. The *muhāṇṭi* of the *khākharā* is 2 ān. and the *khākharā* itself 6 ān. high. On it should be placed a *kalasa* 4 ān. high. On both sides of the *kalasa* there should be figures of lions. The total height of the temple is thus 50 ān.. The walls are 6 ān. thick (6 each, or 6 as the sum of two sides ?). This temple has no Bhadra. In the *anuratha*, there should be 24 *sikharas* ; in the *rāhā* 4, at the rate of 1 in each.

2. Barabhi :

(क) बड़भि गर्भ काठ आङ्गुले १६ प्रति १२ पिष्ट ६ पाभाग ६ दुइ जांघ १० वरण्ड ६ पीड़ा २ गण्डी २० मुचुलि २ श्राहि २ खाखरा १० कलस ५ उम्रा छिड़िव २ वेदि नास्ति। मुचुलि सरिकि स्राहि मेलाण। स्राहि सरिकि खाखरा मुहुटा। खाखरा छिड़िब अढ़ाइ आंगुल २॥० लेखाए पा ५ राहारे मुण्डोए नेखाए ४ अनुरथरे तिनि सिखर लेखाए २४ बड़भिभाग १० रथक पा ५ सिखर २४ मुण्डी ८ परिजङ्घपिष्ट।

( रथक ) २-१॥०-१॥० ( मेलाण ) १॥-॥॥० ( १३४-५ पृः )

The *garbha* of the Barabhi is 16 ān. in length and 12 in breadth. The *pisṭa* is 6 ān., the *pābhāga* 6, the two *jānghas* 10, the *baranḍa* 6, the *piṭhā* 2, the *ganḍi* 20, the *muchuli* 2, the *srāhi* 2, the *khākharā* 10 and the *kalasa* 5 in height. The batter of the *ganḍi* is 2 ān.. There is no *bisama* in this temple.

The *srāhi* should project to a point which is vertically above the edge of the *muchuli*. The *muhānṭi* of the *khākharā* should be vertically above the edge of the *srāhi*. The batter of the *khākharā* is $2^1/_2$ ān. on each side.

In the four *rāhās*, there should be 4 *munḍis*, and in the *anurathas*, there should be 24 in all.

The Barabhi temple consists of 10 bhāgas. It is *pancharatha*. It has 24 *sikharas* and 8 *munḍis*. It should be placed upon the Parijāngha *pisṭa*. The ratio of the *rathakas* should be $2\text{-}1^1/_2\text{-}1^1/_2$ and their projections $1^1/_2\text{-}^3/_4$ ān,.

The Kosoli consists of 60 bhāgas, 9 *rathakas*. It has no *sikharas*. The *rathakas* are in the ratio of 5-5-4-6-6, their projections being 2-1-$^{3}/_{4}$-$^{1}/_{2}$ ān..

## XIX. Miscellaneous.

### XCVIII. Lakshmi-dwāra

The main doorway of the temple is called the Lakshmi-dwara or the door of Lakshmi, the goddess of prosperity.

(छ) दुआर ओसार ४ उच्च आठ ८ ( १२६ पृः )

द्वार ओसार आ ४ उच्च आ ८ ( १६३ पृः )

The door should be 4 ān. wide and 8 in height (in the case of a temple of which the *garbha* is 16 ān. in length).

The term *parichhā* being obscure, it has not been possible to translate the following passages.

लक्ष्मीद्वार ओसार हरि चारि ४।० आङ्गुल पाए। कवाट परिछा उच्च करिब आ १०॥=) विस्वा नवग्रह दुआरे उच्च १३।-) सोल आङ्गुल प्रमाणकु याणी दुआर करिब। सेही लक्ष्मिद्वार उच्च आठ आ ८। ( ८६ पृः )

### XCIX. Torana or the arch

Toranas are usually built near a temple for the ceremony of swinging the idol of the deity.

(क) एवे त्रोणभाग जानि ॥ त्रोणभाग प्रवक्ष्यामि यथाभागन विद्यते। आएम त (=त्रय ?) विभागेन विस्तारा चत्रुविधिक्रमात्। उक्षर्ग। त्रोणादै विस्तार ४ ॥

देवदेउले तोरणा करिब···तोरणाभागपि वक्ष्यामि मुण्डे मुण्ड पङ्क तथा ।०। नवहारा कथयामि पंमाण सलिपि राजिन न भागे ६ ( २३७ पृः )

Erect a *toraṇa* in the temple of the deity. The ratio between the height and the width should be as 3 (?) is to 4. Divide the height into 9 parts of which the foils should be in the ratio of 4 : 3 : 2. Or, divide the height into 11 parts making the foils in the ratio of 4-3-2-2.

## C. Stambha

Here the pillars to be placed under the above *toraṇa* are alone described.

...The *stambha* or pillar should be as high as the *piṣṭa* (of the temple ?). The width of the *stambha* will be $^3/_4$ its height (is it the circumference, or the diameter ?). The *pābhāga* of the *stambha* should be square in section and 6 measures in height. Then should come the *jāngha* 3 measures high, then the *bāndhanā* 1 measure, then the *upar jāngha* 3, lastly the *pālakā*, which is 3 measures in height. The total is thus 16.

According to another reading, the *pābhāga* is 6, the two *jānghas* 16, the *bāndhanā* 1 and the *baraṇḍa* 9.

## CI. Nabagrahas

On a panel over the lintel of the main doorway, it is customary to carve the images of the nine planets. In the present section, we get a description of these deities.

It may not be uninteresting to note in this connection that there is a miniature votive shrine at Sarnath, where figures of the Sapta-matrikas with those of Bhairaba and Ganesh appear over the lintel. These matrikas moreover have been depicted in a dancing mood.

This is (a detailed description of) the nine planets (*i. e.* of their presiding deities). Rabi or the Sun should be set at the S. E. corner (of the temple). His chariot has one wheel. On a lotus, He sits in the *padmāsana.* And (his chariot has) seven horses. The deity has two arms. His colour is like that of the lotus flower. His hand is disposed in the *abhaya mudrā.* Chandra or the Moon is white in colour.....He has a club in one hand. Mangala

is of the colour of silver. He has four arms, having a weapon, a *sula* or spear and a club or *gadā* in the hands, the last one being disposed in the *bara mudrā*. Budha is yellow in colour. He has a sword, shield, club in each hand, the last being disposed in the *bara mudrā*. Brihaspati is yellow in colour. He has four arms. In his hands are the mace, *akshasutra*, *kamaṇḍalu* and the *bara mudrā*. Sani is blue in colour.....He has four arms. In his hands are the spear, *bara mudrā*, the mace and the bow. Rāhu is blue in colour. His face is distorted. He has four arms, with the sword, shield, spear and *bara mudrā* in them. Ketu is of the colour of smoke. He has two arms, in which are the mace and the *bara mudrā*.

*Jhalama*—Amount of projection.

*Kākha*—Side.

*Kalasa*—Water-pot ; similar structure placed on top of a temple ; (rarely) *hāṇḍi* or the moulding known as *kumbha*.

*Kāma*—Piece of work ; moulding.

*Kāndha*—Shoulder; portion at the top of *gaṇḍi* ; *k.-muchuli*, *muchuli* placed at that point in a Khākharā temple.

*Kani*—Moulding of the shape of a V placed sideways ; *k.-piṣṭa*, particular type of *piṣṭa*.

*Kanika*—Outermost pilaster in the body of a temple ; *kanyāsa*.

*Kanyā*—Daughter ; female ; female figure ; *nāga-k.*, female figure with the lower half of the body like that of a snake.

*Kanyāsa*—*Kanika*.

*Kāṇṭi*—Throat ; vertical interval between *piṭhās*, two mouldings or two *poṭalas*.

*Kapuri*—See *khapuri*.

*Kāṭeni*—Amount of take-off in width or length ; batter.

*Kāṭhi*—Stick ; unit of measurement equal to one cubit.

*Kerā*—?

*Khākharā*—Rectangular parallelopiped with vertical sides replaced by an open S-form ; *k.-deul*, temple having such structure at the top ; *k.-muṇḍi*, miniature of Khakhara temple used as ornamental motif.

*Khapuri*—Cranium ; structure resembling flattened bell on *amlā* ; *ghaṇṭā*.

*Khorā*—Foot of an article of furniture; lowermost moulding used in *piṣṭa* or *pābhāga* (of a particular shape) ; *khurā*.

*Khura, Khurā*—Same as *khorā.*

*Khura*—A kind of *pisṭa.*

*Kona*—angle ; corner ; *k.-singha,* figure of a lion placed at the corner of *jāngha.*

*Kumbha*—Water-pot ; similar moulding used in *pābhāga* ; a kind of *pisṭa.*

*Kurma*—Tortoise ; a kind of *pisṭa.*

*Kuṭa*—Mountain ; peak.

*Lakhā*—Particular ornamental pendant suspended from *chānguṭi* of *kalasa.*

*Lakshmi-pāṭa*—Lintel (on account of its having a figure of Lakshmi carved upon it).

*Leṭani*—? used as adj. for a particular kind of *piṭhā.*

*Laharā*—Succession of waves ; corbel.

*Lahari*—Series of waves ; *hangsa-l.,* frieze with figures of the swan.

*Manushya-kauṭuki*—*Gelabāi* scroll.

*Māreni—kāṭeni* ; batter.

*Masṭaka*—Name coined to denote portion of a temple above *gaṇḍi* and below *kalasa.*

*Melāna*—Projection.

*Muchuli*—Circular flattened pillow ; similar moulding placed under *kumbha, kalasa* or *khākharā.*

*Muda*—To close ; *garbha-m.,* horizontal course of stones closing *garbha* ; *raṭna-m.,* similar course closing room above *garbha.*

*Muhāṇṭi*—Short vertical portion at the base of *khurā, khākharā, khapuri.*

*Mukha*—Face ; front ; *m.-sāla,* temple placed in front of Rekha (usually a Bhadra).

*Muṇḍi, Muṇḍei*—Miniature temple set on wall as decora-

tion; *khākharā-m.*, *piṭhā-m.*, *bajra-m.*, *phula-m.*, same with crown like that of a Khakhara, or Bhadra temple or crowned by ornament known as *bajra* or mass of foliage.

*Naba*—Nine; *n.-ratha*, a temple having nine pilasters, resulting from four successive projections upon its face.

*Nāga*—Mythical tribe of serpents; figure, half-man and half-serpent below; *n.-patni*, female *nāga*; *n.-bandhi*, intertwined figure of two or four snakes carved continuously along jamb and lintel.

*Nahaṛa—Lahaṛā*; corbel.

*Napungsaka*—Hermaphrodite; Rekha without *sikharas*.

*Noli*—moulding with the edge like that of a semicircle; torus.

*Olamba*—Corruption of plumb-line.

*Osār*—Width.

*Pā*—Quarter; foot; shortened form of *pābhāga*.

*Pābhāga*—Division corresponding to the foot; set of three, four or five mouldings at the base of a temple (above *piṣṭa* or pedestal).

*Pachha*—Behind; set-back from something.

*Pāda*—Foot; base; *pābhāga*.

*Padma*—Lotus; *p.-piṣṭa*, pedestal of that name.

*Pāga*—Segment; segments produced upon face of temple by producing part of it to a more forward plane.

*Pāhānrā*—Early morning; twilight (?); demarcated edge of mouldings (through which the moulding seems to fade away).

*Pākhuṛā*—Petal; petals carved on *khurā*, *ghanṭā*, etc.; *siju-patra-p.*, carving resembling leaves of Euphorbia.

*Pālakā*—Capital of column (resembling lotus ?) (?); abacus (?).

*Pānapatri*—Pendant suspended from the *ḍori* of *kalasa*.

*Pancha*—Five ; *p.-ratha*, temple having five *pagas* ; *p.-ghanṭa*, Bhadra temple having one set of *piṛhās*.

*Parichhā*—Jamb (?).

*Parijāngha*—A kind of *pisṭa*.

*Pari*—Fairy ; *p.-kanyā*, figure of flying women above central image.

*Pariratha*—Fourth *paga* from centre in *nabaratha* temples.

*Pasibā*—To be set back.

*Paṭā*—Moulding with a square edge.

*Pāṭa*—Flat slab of stone ; *Lakshmi-p.*, slab serving as lintel with image of Lakshmi carved on it ; *Nabagraha-p.*, slab placed above lintel with figures of the nine planets carved upon it ; *parāsa-p.*, course of stone placed across angle of a square room in order to reduce square opening at top into an octagonal opening of smaller dimensions.

*Peṭā*—Moulding used in *khura pisṭa* (cyma recta).

*Pheni, Phenā*—Hood of a serpent ; second moulding in *baranḍa* resembling same ; beak, with cavetto replaced by cyma recta.

*Pherā pakhuṛā*—petals turned upwards.

*Piṛhā*—Flat wooden seat ; elements of which the *gaṇḍi* of Bhadra temples is composed ; *p.-deul*, Bhadra temple.

*Pisṭā, Piṭha, Pristha*—Pedestal (examples, Padma, Singha, Bhadra, Bedi, Suthira, Khura, Kumbha, Parijangha, Kurma).

*Poṭala*—Chapter ; group of *piṛhās*.

*Prati*—Width (corruption of Sans. *prastha*).

*Pristha*—See *pisṭa*.

*Pusangkara, Pungsakara*—?

*Rāhā*—Central projected pilaster of a temple.

*Rathaka*—miniature *ratha* ; *paga*.

*Rekha*—Order of temple ; *r.-deul*, Rekha temple ; *r.-gunā-ghāṭa*, *-uāghāṭa*, *-āghāṭagunāghāṭa*, sum of set-backs of *gaṇḍi* from *baraṇḍa*, batter of *gaṇḍi* and that of *bisama* or only batter of *gaṇḍi* (?).

*Saṛhai*—Cocoanut shell ; element below *ghaṇṭā* in Bhadra temple ; same above *beki* in Khākharā temple.

*Srāhi*—also called *Saṛhai*, *Hāṇḍi*.

*Sikhara*—Miniature of Rekha temple used as ornament on body of Rekha temple.

*Singha*—Lion ; *s.-piṭa*, a kind of *piṭa* ; *s.-āsana*, seat of the deity ; *dopichha-s.*, lion set at corners with one fore-part and two hindparts set at right angles to each other ; *gaja-s.*, figure of triumphant lion sitting upon prostrate elephant ; *s.-virala*, figure of triumphant lion standing on two legs upon prostrate demon or elephant.

*Stambha*—Pillar.

*Sufhira*—having stability ; a kind of *piṭa*.

*Ṭānku*—Particular ornament set at the edge of mouldings or *piṭhā*.

*Toraṇa*—Arch.

*Tripāṭi*—projected borders at upper end of *beki*.

*Uā*—*Rekha-gaṇḍi*.

*Uchharga*—Height.

*Virāla*—Figure of rampant lion standing, with head turned backwards, upon prostrate elephant or demon ; *gaja-v.*, *nara-v.*, same with the head of a lion replaced by that of an elephant, demon (corruption of Sans. *Vyāla*, terrible ?).

## Appendix A.

### Classification of Rekha temples having three elements in their *bāṛa*.

We have already seen that Rekha temples can be roughly divided into two classes : one having three and the other five elements in its *bāṛa*. Of these the former seems to have been the earlier type, while the latter was apparently evolved at a later date. It has appeared from certain observations in Bhubaneśwar that the first type of Rekha temples can be further divided into two sub-types. It is the object of the present appendix to describe those two types without reference to the relative dates of their origin. The question of their evolutionary sequence has to be postponed from present consideration as that cannot be undertaken before the chronology of the temples of Orissa has been satisfactorily determined. With regard to the classification even, we shall have to confine ourselves to such features as our observable with the naked eye, we shall not be able to use the quantitative relations subsisting between different elements of the temples as no data are available on that subject. Investigators favoured with more leisure and ampler resources will have to take up the task of measuring the elements of these temples in the light of the *śilpaśāstras* and then improve the classification which is now being tentatively offered here.

The largest number of Rekha temples having three elements in their *bāṛa* is to be found at Bhubaneśwar in the Puri district. Many of these are in ruins, while some of them display a type of sculpture which is presumably more ancient than the sculptures of Mukteśwara or Liṅgarāj. In one of them, the Paraśurāmeśwara temple, we come across an inscription dated by the late Prof. R. D. Banerji as belonging to the eighth century A. D.* So far no temple of an equal date has been found in Orissa which displays five elements in its *bāṛa*, which was so characteristic of later times. These temples can, therefore, be held to have been introduced into Orissa before temples having five elements in their *bāṛa* had come into being.

The first feature that marks all temples having three elements in their *bāṛa* is that there is a depression in them which marks off clearly the *gaṇḍi* from the *bāṛa*. This depression is never present in temples of the second order in Orissa. The depressed portion may or may not be ornamented with human figures or figures of other designs. When we come to details, we find that these temples can be sub-divided into two sub-types, in one of which the *gaṇḍī* is divided by *bhūmi-amlās* into several *bhūmis*, while in the other, the *gaṇḍi* is absolutely plain without any *bhūmi* divisions in it at all. We shall call these two Types A and B respectively. Type A is sometimes accompanied by a rectangular *jagamohana* as in the temples of Paraśurāmeśwara, Mohini or Uttareśwara, or it might go singly as in Paśchimeśwara or Śatrughneśwara; Type B, however, always goes

* *History of Orissa*, Vol. II, p. 338.

singly and not in one single case has it been found with a *jagamohana* either of the Paraśurāmeswara or of the orthodox Bhadra type. This may, therefore, be taken as an important feature differentiating the two types from one another.

If we now pass on to further details, we notice first of all that Type A is never set upon a *piṣṭa* while Type B may or may not have a *piṣṭa* underneath. The *pābhāga* of Type A is very often made up of three mouldings of equal height as in Paraśurāmeśwara. Its *jāngha* is plain, but one *muṇḍi* or *śikhara* is usually set upon it in the *kanika-paga*. The *gaṇḍi* is divided into several *bhūmis* by *bhūmi-amlās*, which may be round or square in cross-section. Each *bhūmi* is composed of a number of *bhūmi-baraṇḍis*, the number of the latter being usually four. The uppermost *baraṇḍi* is smaller in height than the other three, while a *bho* surmounted on the third *bhūmi-baraṇḍi* reaches out so as to touch the fourth one with its crown. Each *bhūmi* is thus constituted by three and a half *bhūmi-baraṇḍis*, so to say.

The *bisama* on the top of the *gaṇḍi* is not divided into *pagas* as the *gaṇḍi* itself. The *rāhā-paga* is highly projected on each face of the temple, but the frontal one shows a greater projection on part of its body up to a certain height of the *gaṇḍi* than those on the other three sides. Type A is generally *tri-ratha* in plan and rarely *pancha-ratha*. Type B, however, is as frequently *tri-ratha* as *pancha* or *sapta-ratha*.

The *khapuri* of Type A is surmounted by a *kalasa* or by a cylindrical object, the name of which yet remains to be

*J. B. O. R. S.*, Vol. XV, p. 74.

discovered. This object has been identified as a *liṅgam* by Prof. Banerji, but the identification seems to us extremely doubtful. On the top of a ruined temple situated in the north of Kotitirtha in Bhubaneśwar, this object is found to be a cylindrical structure, a foot or so in height, the upper half of which is circular and the lower octagonal (hexagonal ?) in cross-section. The upper portion is carved up into a band surmounted by a short *amlā* from which it is separated by a well-marked depression. In the temple of Siddheśwara in Baudh, where Prof. Banerji discovered it, the upper half of the object has been left plainly circular. This might have given him the impression that it was a *liṅgam*. On the banks of the Ravi at Bajaura in the Kangra district, we find a similar object which had once crowned some *tri-anga* Rekha temple at that place. That object is similar to the object in question, but it is there cut up into various designs, in such a manner that any identification of it with a *liṅgam* is rendered impossible. Whatever might be its name, we find that it is never present in temples of Type B which are uniformly surmounted by a *kalasa* of the usual design.

There is an interesting feature connected with the iconography of temples of Type A. We notice first of all that *virāla* figures, which are prolific in the later temples of Orissa, are entirely wanting in their case. So also are *śikharas* of the *khākharā-muṇḍi* variety. Amorous scenes are depicted, but nowhere with the same amount of openness as in the late temples.

Let us now put together in tabular form the characteristics of the two types of *tri-anga* Rekha temple for facility of comparison.

Type A may or may not be accompanied by a *jaga-mohana* of the Paraśurāmeśwara type.

1. Absence of *piṣṭa*.
2. Generally *tri-ratha*, rarely *pañcha-ratha*, never more than that.
3. *Pābhāga* composed of three equal mouldings generally, among which the *kumbha* moulding is replaced by a *noli*.
4. *Jāngha* plain, with inset of *muṇḍis*.
5. *Bhūmi-amlās* in *kanika-paga*. The *amlā* may be square or round. Four *bhūmi-baraṇḍis*, of which the highest two are clasped together.
6. *Bisama* without *paga* divisions.
7. Frontal *rāhā* shows extreme projection. It is usually surmounted by a medallion with the figure of some deity set within.
8. *Khapuri* may or may not be present.
9. *Kalasa* or the cylindrical object on top.

Type B always goes singly.

1. *Piṣṭa* may or may not be present.
2. *Tri-ratha, pancha-ratha* or *sapta-ratha*.
3. Plain *gaṇḍi*.
4. *Kalasa* present, but never the other object.

At Bhubaneśwar, the following temples belong to Type A, but the list must not be taken to be exhaustive : the ruined temple to the north of Kotitirtha, Paschimeśwara, Paraśurāmeśwara, Mohinī, Mārkaṇḍyeśwara, Uttareśwara, Gauri-Śaṅkar-Ganeṣ, Bāgheśwara, Biśweśwara, three ruined temples beside Rāmeśwara. The following temples belong to Type B : an empty temple to the west of

Sobhaneśwara, Kotitīrtha, Beleśwara, Tāleśwara, Chakreśwara and Mangaleśwara.

It would be interesting to compare these temples of Bhubaneśwar with those situated in other parts of Orissa. The temples of Baudh as photographed by the late Prof. R. D. Banerji show that all of them belong to Type A of our scheme. Two of them, namely Siddheśwara and Nīlmādhava, have *jagamohanas* of the Paraśurāmeśwara type, while that situated in the N. W. corner of Rāmeśvara in Baudh is not accompanied by any *jagamohana*. The ground-plan of this temple is unlike that of the temples of Bhubaneśwar, being formed by two intersecting squares, instead of the usual square, the sides of which have been partly projected forward. But this temple presents one feature which is interesting from another point of view. Underneath the frontal *rāhā*, there is a porch supported by two short pillars. This is a feature found rarely in Orissa, but present quite commonly at Osian in Rajputana and different portions of the Punjab Himalayas. The temples of Sāripalli in Vizagapattam and those in the Mahanadi valley in Orissa have to be examined carefully in this connection.

Another ancient site of temple-building in Orissa seems to have been Khiching in the State of Mayurbhanj. Although the place is now entirely in ruins, still it is very interesting to find among the existing ruins, examples of both the types of temples we have described in connection with Bhubaneśwar. The temple of Kutaitundi belongs to Type A, while that of Chandraśekhara belongs to Type B. Kutaitundi has a *pābhāga* composed of four mouldings as in the ruined temple to

the west of Sobhaneśwara at Bhubaneśwara. The *gaṇḍī* however presents a feature which is to be met with nowhere else in Orissa. Instead of three and a half *bhūmi-amlās* we find here only two *bhumi-amlās* and a half. The Chandraśekhara temple presents another interesting feature, namely, that its *kanikapaga* in the *bāṛa* has been ornamented with a number of pilasters instead of with *muṇḍis* of the usual type. This equates it with the Rekha temples of Manbhum rather than with Orissa, for it is in Telkupi in Manbhum that we find this feature occurring once more.

We thus find that although the two temples of Khiching present features in common with those of Bhubaneśwar, yet they present features which display a certain originality of design. Mr. Chanda's study of the sculptures of Khiching led him to the conclusion that Khiching was to be regarded as a semi-independent centre of Art having affiliations with Gaur, Magadha and Orissa, but also possessing certain characters distinctly of its own. The same might be said with regard to Architecture, but with this reservation that the originality displayed in this case did not express itself in as vigorous a form as in the allied field of sculpture.*

* The two temples of Khiching have been recently restored with great care under the able supervision of Mr. Sailendra Prasad Bose of the Mayurbhanj Archaeological Survey. A motor road has also been constructed connecting Khiching with the Chaibassa-Jajpur Road. This important place has thus been made easily approachable, for which thanks are due to the State of Mayurbhanj.
